this work is the third small wars journal anthology focusing on radical sunni islamic terrorist and insurgent groups it covers this professional journal s writings for 2015 and complements the earlier global radical islamist insurgency anthologies that were produced as vol i 2007 2011 published in 2015 and vol ii 2012 2014 published in 2016 this anthology which offers roughly five

hundred pages of additional analysis follows the same general conceptual breakdown as the earlier works and is divided into two major thematic sections one focusing on jihadi terrorism insurgency and the islamic state in context and the other focusing on us allied policy and counter jihadi and counter islamic state strategies

named to kirkus reviews best books of 2023 a remarkable book the new york times this fearless deeply reported book about laboratory accidents asks the haunting question some elite scientists don't want the public to entertain did the covid 19 pandemic start with a lab leak in wuhan china this is an obvious question yet there's been an extraordinary effort by government officials in china as well as leading scientific experts in the united states and around the world to shut down any investigation or discussion of the lab leak theory in private however some of the world's elite scientists have seen a lab accident as a very real and horrifying possibility they know what the public doesn't lab accidents happen with shocking frequency even at the world's best run labs that's among the revelations from alison young the award winning investigative reporter who has spent nearly 15 years uncovering shocking safety breaches at prestigious u.s. laboratories for usa today and other respected news outlets in pandora's gamble young goes deep into the troubling history and enormous risks of leaks and accidents at scientific labs she takes readers on a riveting journey around the world to some of the worst lab mishaps in history including the largely unknown stories of the lab workers at the u.s. army's camp detrick who suffered devastating infections at alarming rates during world war ii and her groundbreaking reporting exposes for the first time disturbing new details about recent accidents at prestigious laboratories and the alarming gaps in government oversight that put all of us at risk sourced through meticulous reporting and exclusive interviews with key players including dr. anthony fauci former cdc director tom frieden and others young's examination reveals that the only thing rare about lab accidents is the public rarely finds out about them because when accidents happen powerful people and institutions often work hard to keep the information secret

volume i b an outbreak of a respiratory disease first reported in wuhan china in december 2019 and the causative agent was

discovered in January 2020 to be a novel betacoronavirus of the same subgenus as SARS-CoV and named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Coronavirus disease 2019 (COVID-19) has rapidly disseminated worldwide with clinical manifestations ranging from mild respiratory symptoms to severe pneumonia and a fatality rate estimated around 2%. Person-to-person transmission is occurring both in the community and healthcare settings. The World Health Organization (WHO) has recently declared the COVID-19 epidemic a public health emergency of international concern. The ongoing outbreak presents many clinical and public health management challenges due to limited understanding of viral pathogenesis, risk factors for infection, natural history of disease including clinical presentation and outcomes, prognostic factors for severe illness, period of infectivity, modes and extent of virus inter-human transmission as well as effective preventive measures and public health response and containment interventions. There are no antiviral treatment nor vaccine available but fast-track research and development efforts including clinical therapeutic trials are ongoing across the world. Managing this serious epidemic requires the appropriate deployment of limited human resources across all cadres of health care and public health staff including clinical laboratory, managerial and epidemiological data analysis and risk assessment experts. It presents challenges around public communication and messaging around risk with the potential for misinformation and disinformation. Therefore, integrated operational research and intervention learning from experiences across different fields and settings should contribute towards better understanding and managing COVID-19. This research topic aims to highlight interdisciplinary research approaches deployed during the COVID-19 epidemic, addressing knowledge gaps and generating evidence for its improved management and control. It will incorporate critical, theoretically informed and empirically grounded original research contributions using diverse approaches: experimental, observational and intervention studies, conceptual framing, expert opinions and reviews from across the world. The research topic proposes a multi-dimensional approach to improving the management of COVID-19 with scientific contributions from all areas of virology, immunology, clinical microbiology, epidemiology, therapeutics, communications as well as infection prevention and public health risk assessment and management studies.
