this book explores the role of phonological templates in early language use from the perspective of usage based phonology and exemplar models and within the larger developmental framework of dynamic systems theory after analysing children s first words and their adult targets vihman sets out procedures for establishing the children s later prosodic structures and templates drawing on data from american and british english estonian finnish french italian and welsh she also provides briefer longitudinal accounts of template use in arabic and brazilian portuguese the children are found to begin with simple word forms that match their selected adult targets this is followed by the production of more challenging words adapted to fit the child s existing patterns early accuracy is replaced by later recourse to an inner model a template of a favoured word shape the book also examines the timing fading quantification and function of child phonological templates in addition two chapters focus on the use of templates in adult language in the core grammar and in the more creative morphology of colloquial short forms and hypocoristics in french and estonian and of english rhyming compounds the idea of templates is traced back to its origins in prosodic morphology but its uses are most in evidence in the informal settings of adult language at play throughout the volume the discussion returns to the issues of emergent systematicity the roles of articulatory and memory challenges for children and the similarities and differences in the function of templates for adults as compared with children

this book deals with the general concepts in stereotomy and its connection with descriptive geometry the social background of its practitioners and theoreticians the general methods and tools of this technology and the specific procedures for the members built in hewn stone including arches squinches stairs and vaults ending with a chapter discussing the open problems in this field thus it can be used as a reference book in the subject but it can also read as a compelling narrative on this subject one of the main branches of pre industrial technology construction in hewn stone requires the use of geometrical methods and tools to assure that individual stones either blocks or

voussoirs fit with one another and conform to the general shape of walls arches or vaults during the late middle ages and the renaissance such techniques and instruments were developed empirically by masons and architects later on learned mathematicians and engineers introduced refinements in these procedures and this branch of knowledge known as stereotomy furnished much material to descriptive geometry a science born with the french revolution which provided the foundation for projective geometry
