since the publication of my book mathematical statistics shao 2003 i have been asked many times for a solution manual to the exercises in my book

without doubt exercises form an important part of a textbook on mathematical statistics not only in training students for their research ability in mathematical statistics but also in presenting many additional results as complementary material to the main text written solutions to these exercises are important for students who initially do not have the skills in solving these exercises completely and are very helpful for instructors of a mathematical statistics course whether or not my book mathematical statistics is used as the textbook in providing answers to students as well as finding additional examples to the main text motivated by this and encouraged by some of my colleagues and Springer Verlag editor John Kimmel I have completed this book mathematical statistics exercises and solutions this book consists of solutions to 400 exercises over 95 of which are in my book mathematical statistics many of them are standard exercises that also appear in other textbooks listed in the references it is only a partial solution manual to mathematical statistics which contains over 900 exercises

this text contains 300 problems in mathematical statistics together with detailed solutions

originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions the level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics at this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives the solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves the notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems

the complexity of today's statistical data calls for modern mathematical tools many fields of science make use of mathematical statistics and require continuous updating on statistical technologies practice makes perfect since mastering the tools makes them applicable our book of exercises and solutions offers a wide range of applications and numerical solutions based on R in modern mathematical statistics the purpose is to provide statistics students with a number of basic exercises and also an understanding of how the theory can be applied to real world problems the application aspect is also quite important as most previous exercise books are mostly on theoretical derivations also we add some problems from topics often encountered in recent research papers the book was written for statistics students with one or two years of coursework in mathematical statistics and probability professors who hold courses in mathematical statistics and researchers in other fields who would like to do some exercises on math statistics

the exercises are grouped into seven chapters with titles matching those in the author's mathematical statistics can also be used as a stand alone because exercises and solutions are comprehensible independently of their source and notation and terminology are explained in the front of the book suitable for self study for a statistics ph d qualifying exam
