this book explains how the brain interacts with the social world and why stories matter how do our brains enable us to tell and follow stories and how do stories affect our minds in stories and the brain paul b armstrong analyzes the cognitive processes involved in constructing and exchanging stories exploring their role in the neurobiology of mental functioning armstrong argues that the ways in which stories order events in time imitate actions and relate our experiences to others lives are correlated to cortical processes of temporal binding the circuit between

action and perception and the mirroring operations underlying embodied intersubjectivity he reveals how recent neuroscientific findings about how the brain works how it assembles neuronal syntheses without a central controller illuminate cognitive processes involving time action and self other relations that are central to narrative an extension of his previous book how literature plays with the brain this new study applies armstrong's analysis of the cognitive value of aesthetic harmony and dissonance to narrative armstrong explains how narratives help the brain negotiate the neverending conflict between its need for pattern synthesis and constancy and its need for flexibility adaptability and openness to change the neuroscience of these interactions is part of the reason stories give shape to our lives even as our lives give rise to stories taking up the age old question of what our ability to tell stories reveals about language and the mind this truly interdisciplinary project should be of interest to humanists and cognitive scientists alike

an investigation of the emotional power of narrative that illuminates the relationship between the human brain and the stories we tell as humans we think in stories stories that allow us to feel and share emotions in order for this phenomenon to work our brains and the ways in which we tell stories must be attuned to each other but how exactly does this happen tapping into the essence of thinking in stories fritz breithaupt draws on the latest scientific research including a retelling study comparable to the telephone game with more than 12 000 participants and experiments in which chatgpt functions as storyteller this wide ranging study includes analyses of political history novels fairy tales and everyday office gossip proposes a new theory of narrative that focuses on emotions and affects and hypothesizes on the evolution of narratives among our hominid ancestors redefining us as beings who anchor ourselves in the world through narratives breithaupt introduces a new kind of psychology that cuts to the core of how and why humans feel the need to tell stories

narratives enable readers to vividly experience fictional and non fictional contexts writers use a variety of language features to control these experiences they direct readers in how to construct contexts how to draw inferences and how to identify the key parts of a story writers can skilfully convey physical sensations prompt emotional states effect moral responses and even alter the readers attitudes mind brain and narrative examines the psychological and neuroscientific evidence for the mechanisms which underlie narrative comprehension the authors explore the scientific developments which demonstrate the importance of attention counterfactuals depth of processing perspective and embodiment in these processes in so doing this timely interdisciplinary work provides an integrated account of the research which links psychological mechanisms of language comprehension to humanities work on narrative and style

stories can inspire love anger fear and nostalgia but what is going on in our brains when this happens and how do our minds conjure up worlds and characters from the words we read on the page rapid advances in the scientific understanding of the brain have cast new light on how we engage with literature this book collaboratively written by an experienced neuroscientist and literary critic and writer explores these new

insights key concepts in neuroscience are first introduced for non specialists and a range of literary texts by writers such as ian mcewan jim crace and e l doctorow are read in light of the latest scientific thought on the workings of the mind and brain brain mind and the narrative imagination demonstrates how literature taps into deep structures of memory and emotion that lie at the heart of our humanity it will be of interest to readers of all sorts and students from both the humanities and the sciences

this book presents a unique and intuitively compelling way of understanding how humans think it argues that narratives are the natural mode of thinking that the urge to think narratively reflects known neurological processes and that although narrative thinking is a product of evolution it enables us to transcend our evolutionary limits and actively shape our own futures in remarkably engaging language the authors describe how the currency of neural activity in the brain is transformed into the qualitatively different currency of conscious experience the everyday purposeful story like experience with which we all are familiar the book then examines the nature of thought and how it leads to purposeful action discussing among other concerns how memories about the past perceptions about the present and expectations about the future are structured as plausible coherent narratives by causation purpose and time and how errors are introduced into one s narratives both naturally and by other people often intentionally and how those errors bias one s expectations about the future and the actions taken or not taken as a consequence each of these discussions is followed by a commentary that ties them to interesting facts and questions from throughout the physical and social sciences the book is concluded with the argument that narrative thought is what is meant when one uses the word mind

this book helps graduate students learn about narrative inquiry in a focused yet meaningful way providing them with a practical and theoretical foundation to help jump start their research agenda in narrative inquiry

the evocation of narrative as a way to understand the content of consciousness has sparked truly interdisciplinary work among psychologists

philosophers and literary critics the research presented in this volume should appeal to the general reader and researchers enmeshed in these problems

in the ten years since the sacred balance was first published global warming has become a major issue as glaciers and polar ice caps have begun to melt at an alarming rate populations of polar bears have dwindled the intensity of hurricanes and tsunamis has drastically increased coral bleaching is occurring globally and the earth has experienced its hottest years in over four centuries in this new and extensively revised and amplified edition of his best selling book david suzuki reflects on these changes and examines what they mean for our place in the world the basic message of this seminal best selling work remains the same we are creatures of the earth and as such we are utterly dependent on its gifts of air water soil and the energy of the sun these elements are not just external factors we take them into our bodies where they are incorporated into our very essence what replenishes the air water and soil and captures sunlight to vitalize the biosphere is the diverse web of all beings the recently completed human genome project has revealed that all species are our biological kin related to us through our evolutionary history and it appears that our need for their company is programmed into our genome the cataclysmic events of the last decade require that we rethink our behaviour and find a new way to live in balance with our surroundings this book offers just such a new direction for us all

what if life after death is not a mystery but a final dream you never wake from the eternal dream theory explores consciousness at the edge of life blending neuroscience dream science and philosophy to explain near death experiences heaven hell and the mind s capacity to create worlds from the brain s last chemical surges to the collapse of perceived time this book examines how your final moments may unfold as a self generated immersive experience shaped by memory emotion and identity not religious not faith based not pseudoscience just a thoughtful evidence informed theory that bridges science and human experience discover a new perspective on death consciousness and the possibilities that await beyond the final heartbeat

character and identity philosophical foundations of political and sociological perspectives is designed by editor morton a kaplan to show despite the fundamental flaws in the classical greek accounts of truth and knowledge why its quest for rational knowledge remains legitimate and vital to the concepts of character and identity to set the stage part one includes a statement of the classical greek position by dean jude dougherty an account of the contemporary anticlassical stories position by john simpson and an initial attempt to restore the greek concept of rational inquiry by lloyd eby in subsequent chapters kaplan restates the greek position and shows why developments in science and philosophy are incompatible with the greek concepts of truth and knowledge a brief excursus through the history of philosophy is intended to show how the greek quest can be pursued in a manner consonant with the contemporary realm of knowledge in the course of this argument it will be shown why leo strauss who regarded contemporary philosophy as the prisoner of a mistaken seventeenth century paradigm fatally misconceived the

role of seventeenth century philosophy and its relationship to contemporary thought kaplan argues that contemporary philosophy is in large part a response to the breakdown of hegel a great attempt to provide a modern alternative to aristotle's synoptic philosophy an attempt that brings history and historicity into the center of the picture kaplan shows why postmodernism is based on an incomplete and ultimately incoherent understanding of the consequences of the collapse of the hegelian system and of the character of language in a version of pragmatism that restores the concept of objective truth kaplan then explores the political and sociological aspects of this philosophical position and shows how it relates to character and identity he then shows how a weakly ordered but relevant position with respect to ethics and morals is consistent with a sustainable contemporary understanding of the quest for rational objective knowledge

we define our conscious experience by constructing narratives about ourselves and the people with whom we interact narrative pervades our lives conscious experience is not merely linked to the number and variety of personal stories we construct with each other within a cultural frame but is subsumed by them the claim however that narrative constructions are essential to conscious experience is not useful or informative unless we can also begin to provide a distinct organized and empirically consistent explanation for narrative in relation to consciousness understanding the role of narrative in determining individual and collective consciousness has been elusive from within traditional academic frameworks this volume argues that addressing so broad and complex a problem requires an examination from outside our insular disciplinary framework such an open examination would be informed by the inquiries and approaches of multiple disciplines recognition of the different approaches to examining personal stories will allow for the coordination of how narrative seems its phenomenology with what mental labor it does its psychology and how it is realized its neurobiology only by overcoming the boundaries erected by multiple theoretical and discursive traditions can we begin to comprehend the nature and function of narrative in consciousness narrative and consciousness brings together essays by exceptional scholars and scientists in the disciplines of literary theory psychology and neuroscience to examine how stories are constructed how stories structure lived experience and how stories are rooted in material reality the human body the specific topics addressed include narrative in the development of conscious awareness autobiographical narrative fiction and the construction of self trauma and narrative disruptions narrative memory and identity and the physiological and neural substrate of narrative it is the editors hope that the multidisciplinary nature of this collection will challenge the reader to move beyond disciplinary confines and toward a coherent interdisciplinary dialogue
