the analytic network process anp developed by thomas saaty in his work on multicriteria decision making applies network structures with dependence and feedback to complex decision making this book is a selection of applications of anp to economic social and political decisions and also to technological design the chapters comprise contributions of scholars consultants and people concerned about the outcome of certain important decisions who applied the analytic network process to determine the best outcome for each decision from among several potential outcomes the anp is a methodological tool used to organize knowledge and thinking elicit judgments registered in both in memory and in feelings quantify the judgments and derive priorities from them and finally synthesize these diverse priorities into a single mathematically and logically justifiable overall outcome in deriving this outcome the anp also allows for the representation of diverse opinions in the midst of discussion and debate

graph theory a branch of mathematics studies the relationships between entities using vertices and edges uncertain graph theory has emerged within this field to model the uncertainties present in real world networks graph labeling involves assigning labels typically integers to the vertices or edges of a graph according to specific rules or constraints this paper introduces the concept of the turiyam neutrosophic labeling graph which extends the traditional graph framework by incorporating four membership values truth indeterminacy falsity and a liberal state at each vertex and edge this approach enables a more nuanced representation of complex relationships additionally we discuss the single valued pentapartitioned neutrosophic labeling graph the paper also examines the relationships between these novel graph concepts and other established types of graphs in the future directions section we propose several new classes of uncertain graphs and labeling graphs and the appendix of this paper details the findings from an investigation into set concepts

within uncertain theory these set concepts have inspired numerous proposals and studies by various researchers driven by their applications mathematical properties and research interests
