the first comprehensive monograph on periphyton this book contains contributions by scientists from around the globe multi disciplinary in nature it covers both basic and applied aspects of periphyton and is applicable worldwide in natural extensive and intensive managed systems periphyton as described in this book refers to the entire complex of attached aquatic biota on submerged substrates including associated non attached organisms and detritus thus the periphyton community comprises bacteria fungi protozoa algae zooplankton and other invertebrates periphyton is important for various reasons as a major contributor to carbon fixation and nutrient cycling in aquatic ecosystems as an important source of food in aquatic systems as an indicator of environmental change it can also be managed to improve water quality in lakes and reservoirs it can greatly increase aquaculture production it can be used in waste water treatment the book provides an international review of periphyton ecology exploitation and management the ecology part focuses on periphyton structure and function in natural systems the exploitation part covers its nutritive qualities and utilization by organisms particularly in aquaculture the final part considers the use of periphyton for increasing aquatic production and its effects on water quality and animal health in culture systems this book will help scientists and entrepreneurs further understand the ecology and production of aquatic systems and venture into new and promising areas

maintaining a practical perspective bioequivalence and statistics in clinical pharmacology second edition explores statistics used in day to day clinical pharmacology work the book is a starting point for those involved in such research and covers the methods needed to design analyze and interpret bioequivalence trials explores when how and why these studies are performed as part of drug development and demonstrates the methods using real world examples drawing on knowledge gained directly from working in the pharmaceutical industry the authors set the stage by describing the general role of statistics once the foundation of clinical pharmacology drug development regulatory applications and the design and analysis of bioequivalence trials are established including recent regulatory changes in design and analysis and in particular sample size adaptation they move on to related topics in clinical pharmacology involving the use of cross over designs these include but are not limited to safety studies in phase i dose response trials drug interaction trials food effect and combination trials qtc and other pharmacodynamic equivalence trials proof of concept trials dose proportionality trials and vaccines trials this second edition addresses several recent developments in the field including new chapters on adaptive bioequivalence studies scaled average bioequivalence testing and vaccine trials purposefully designed to be instantly applicable bioequivalence and statistics in clinical pharmacology second edition provides examples of sas and r code so that the analyses described can be immediately implemented the authors have made extensive use of the proc mixed procedures available in sas

this book brings together a selection of original studies submitted to biodiversity and conservation that address biodiversity and conservation in europe europe is certainly the most intensively inventoried region of the world detailed maps are available for species distributions while action plans are being drawn up for species under threat at the same time the wildlife of europe has been subject to enormous human pressures with limited wilderness sites remaining in most countries europe consequently presents a case study of what the human impact on biodiversity has been and also what can be done to improve the situation the contributions in this volume are drawn from a wide range of countries and discuss diverse organism and habitat types they collectively provide a snap shot of the sorts of studies and actions being taken in europe to address issues in biodiversity and conservation topical examples that will make the volume especially valuable for use in conservation biology courses
