american medicine attracts some of the brightest and most motivated people the country has to offer and it boasts the most advanced medical technology in the world a wondrous parade of machines and techniques such as pet scans mri angioplasty endoscopy bypasses organ transplants and much more besides and yet writes dr eric cassell what started out early in the century as the exciting conquest of disease has evolved into an overly expensive over technologized uncaring medicine poorly suited to the health care needs of a society marked by an aging population and a predominance of chronic diseases in doctoring the nature of primary care medicine dr cassell shows convincingly how much better fitted advanced concepts of primary care medicine are to america s health care needs he offers valuable insights into how primary care physicians can be better trained to meet the needs of their patients both well and sick and to keep these patients as the focus of their practice modern medical training arose at a time when medical science was in ascendancy cassell notes thus the ideals of science objectivity rationality became the ideals of medicine and disease the target of most medical research became

the logical focus of medical practice when clinicians treat a patient with pneumonia they are apt to be thinking about pneumonia in general which is how they learn about the disease rather than this person's pneumonia this objective rational approach has its value but when it dominates a physician's approach to medicine it can create problems for instance treating chronic disease such as rheumatoid arthritis diabetes stroke emphysema and congestive heart failure is not simply a matter of medical knowledge for it demands a great deal of effort by the patients themselves they have to keep their doctor appointments take their medication do their exercises stop smoking the patient thus has a profound effect on the course of the disease and so for a physician to succeed he or she must also be familiar with the patient's motivations values concerns and relationship with the doctor many doctors eventually figure out how to put the patient at the center of their practice but they should learn to do this at the training level not haphazardly over time to that end the training of primary care physicians must recognize a distinction between doctoring itself and the medical science on which it is based and should try to produce doctors who rely on both their scientific and subjective assessments of their patients overall needs there must be a return to careful observational and physical examination skills and finely tuned history taking and communication skills cassell also advocates the need to teach the behavior of both sick and well persons evaluation of data from clinical epidemiology decision making skills and preventive medicine as well as actively teaching how to make technology the servant rather than the master and offers practical tips for instruction both in the classroom and in practice most important doctoring argues convincingly that primary care medicine should become a central focus of america's health care system not merely a cost saving measure as envisioned by managed care organizations indeed cassell shows that the primary care physician can fulfill a unique role in the medical community and a vital role in society in general he shows that primary care medicine is not a retreat from scientific medicine but the natural next step for medicine to take in the coming century
