while there has been discussion for decades about the need to rethink the core purpose of academia to enable all to live well on a planet of finite resources humanity's present predicaments point to a paradox at the heart of the academic enterprise although academic institutions have originated research and innovations that underpin much of what we view as development and progress these same advances are also responsible for the global crises we now face indeed many voices are now arguing that academia can and must do more to drive the transformative change that is

needed if we are to avert the imminent catastrophe that is almost upon us the alliance for sustainability leadership in education eauc in conjunction with second nature and the united nations environment s youth and education alliance announced in 2019 that over 7 000 higher and further education institutions across six continents were declaring a climate emergency with a three point plan for action as part of the race to zero this enshrined a bolder commitment from academia to play its part in achieving net zero greenhouse gas emissions while there has been success over several decades in fostering education for sustainable development esd and in embedding sustainability in curricula the efficacy of this has arguably been limited by the disciplinary silos in which academics find themselves similarly the research and scholarly work that is needed to fully understand planetary limits transcends the traditional silos of academic disciplines this research topic then will examine what needs to change to optimise esd and transdisciplinary approaches to research and teaching it will explore ways in which theories of change can be brought to bear on these issues our research topic also centres on the responsibility acknowledged increasingly by academics for academic institutions and sectors and for academics themselves to do more as trusted educators communicators and policy influencers academia has unique potential and responsibility to guide students and society through this transition to a better future in the case of many academics this means embracing advocacy and activism as their moral responsibility at this point in humanity s history to this end the research topic will consider ways in which climate justice principles may be used to explore the responsibilities of academic institutions as one example of an actor with the capacity to influence the drivers of climate breakdown to act in some nations academic institutions have fallen prey to a set of neoliberal assumptions that have arguably diminished the agency of individual academics the marketisation of higher education is rife in some nations e g uk and us and while some academics have documented rising inequality a deepening climate and ecological crisis socio economic breakdown and the deteriorating psychological and physical well being these engender they have so far proven mostly powerless to reorient their fields to confront these challenges at the institutional level consequently they remain unable to pursue an agenda for change that benefits their students and wider society this research topic welcomes research that explores actions available to academics from diverse perspectives including models of behavioural change decades of research have shown that warnings do not work and that evidence based recommendations do not necessarily translate into policy or institutional

change academics increasingly refer to a broken science society contract suggesting that calls to listen to the science and expectations that warnings issued by scientists will be heeded reflect a depoliticized view of the relationships between science and society this failure to recognise the intricate ways in which science and policy are connected raises questions about the neutrality of research and the academic enterprise our research topic invites articles that explore how we might re make the science society contract questions about the independence and interdependence of research and teaching inevitably arise when academic institutions are in receipt of funds from corporations charities foundations and individuals institutions can be compromised by vested interests often in the form of corporate interests that can influence research curriculum and staff appointments and the will of senior management to address this problem is poor while there are laudable initiatives aimed at resolving intersecting challenges and promoting transdisciplinary approaches in higher education it is fair to say that increasing numbers of academics globally realise that we are not set up to ready society for an era of colliding environmental and social crises many fear that academia is guilty of perpetuating the problems that have created this crisis and while growing numbers hold this view few have ready answers as to what more academics and academic institutions can do in spite of this some academics have chosen to step outside of their conventional roles embracing advocacy and activism either taking individual action outside of their role or seeking to drive change within their institutions one problem is that action is fragmented often reliant upon the energies and tenacity of one or more individuals who have sought to re define their roles to embrace the responsibility they feel to act the research topic will serve to aggregate work on academic activism and to raise awareness of ways in which academics can act it will also examine the notion that we need to remake the science society contract and will explore what that entails the research topic will explore the interrelations between science and society and highlight the need to examine political dimensions of decision making and knowledge production to begin to provide answers to the questions of what it is that academics can do to drive transformational change this research topic brings together voices from diverse disciplines and nations their voices have in common one thing each has reflected on or re imagined their role and purpose as an academic and each has embraced advocacy or activism the articles will be organised around three broad themes i in what ways are our academic institutions either failing or succeeding we invite articles that expose the overt and covert influences on academia such as neoliberal

structures and fossil fueled research agendas we also invite articles centred on examples of good practice such as initiatives to foster transdisciplinary approaches to research and education ii trailblazers for transformative change we invite case studies and critiques from the front lines from academics exploring and putting into practice their own take on what can i do evaluations of what has and has not worked to drive change at the institutional and individual levels are welcomed iii the disruptors that are already initiating transformations in he the growth of for profit private providers open access teaching resources and other online approaches that threaten the business models of existing public and nonprofit institutions who struggle to compete with the relevance and just in time education that is becoming available via novel actors we welcome articles exploring the potential for disruption

in this book i have concentrated on drawing attention to various conceptions of accountability that might be brought to bear in judging the practice of social research much of the book is organized around making explicit the assumptions that influence what counts as proper research in society including assumptions about how social inquirers might be held accountable my focus is on reviewing discourses around the practice of professional

inquiry with a view to reconsidering the way in which people create expectations for accountable social inquiry my focus hereon is related to my concern that the manner in which judgments about researchers accountability are made is not without social consequences for our way of living in society i have approached the issues by beginning with a discussion of tenets of the position called positivism so named by certain proponents and by considering the view on accountability that is implied by adherence to these tenets briefly expressed positivist argumentation suggests that researchers are required to do science in a manner that warrants their being considered indeed scientists i use my discussion of accountability as seen within positivist argumentation to explicate ways in which alternative positions have arisen as ways of treating accountability issues through my way of comparing the various positions i hope to provide some indication of the complexity of ethical and accountability issues in social inquiry
