this book contains innovative integrated solutions in education religion science economics psychology politics and current affairs because these are not viewed as independent subjects delineated by some divine wisdom but rather are interrelated and a part of the whole that is life and are a part of each dialogues among fictitious characters and a story are used to make reading more interesting there are three sections each section can be read independently and while starting from a different perspective attempts to provide a unified and whole view of life the first section is about the essence of the teachings of the seven great religions there have been many religiously fueled wars and atrocities in the past and there are currently ongoing conflicts fueled by religion whether in chechnya kashmir the west bank jerusalem cyprus lebanon sudan bosnia kosovo tibet or iraq religiously fueled conflicts are often instigated by non religious forces like politics socio economics or psychology in all cases however religion or in tibet anti religion propels the conflict therefore resolving these conflicts just as reducing islamic terrorism requires not only political and economic but also a religious response if the solutions are to last a specific religious solution is advocated the second section is about science and philosophy it is founded in modern physics and provides a philosophy that shows the consistency of modern physics with the foundational teachings of the major religions it also provides a hypothesis for a unified theory the third section is about economics psychology and current affairs and provides potential solutions to the very serious problems humanity faces the appendix is about the theological debates among the great religions

this book deals with the use of technology in science teaching the author is not nor has ever had an intention of being a techie rather i spent the first decade of my professional life as a high school physics teacher making occasional uses of technology to further student understanding and to automate my own teaching practices during my graduate work my interest in the use of technology continued catalyzed to some extent by the increasing availability of graphical interfaces for computers the realization struck that the computer was more and more becoming a tool that all teachers could use to support their teaching practice not simply those with a passion for the technology itself the rapid changes in the hardware and software available however frequently caused me to reflect on the usefulness of technology if it were to change at such a rapid pace would anyone save for those who diligently focused on the development of these tools be able to effectively use technology in science teaching was change to rapid to yield a useful tool for teachers to address this interest i examined the nature of science teaching during this century using the equally fluid notion of scientific literacy which formed the organizing principle for this study the result is a examination of how technology was used to accomplishing this goal of producing scientifically literate citizens what was observed is that technology indeed consistently came to the service of teachers as they attempted to achieve this goal

this book gives a general coverage of learning management systems followed by a comparative analysis of the particular lms products review of technologies supporting different aspect of educational process and the best practices and methodologies for lms supported course delivery provided by publisher
