Retention and Resistance combines personal student narratives with a critical analysis of the current approach to retention in colleges and universities and explores how retention can inform a revision of goals for first-year writing teachers. Retention is a vital issue for institutions, but as these students' stories show, leaving college is often the result of complex and idiosyncratic individual situations that make institutional efforts difficult and ultimately ineffective. An adjustment of institutional and pedagogical objectives is needed to refocus on educating as many students as possible, including those who might leave before graduation. Much of the pedagogy, curricula, and methodologies of composition studies assume students are preparing for further academic study. Retention and Resistance argues for a new kairotic pedagogy that moves toward an emphasis on the present classroom experience and takes students' varied experiences into account, infusing the discourse of retention with three individual student voices. Powell explores the obligation of faculty to participate in designing an institution that educates all students, no matter where they are in their educational journey or how far that journey will go.

Dealing with a broad variety of topics in the fields of gender, e-learning, and educational games, this book brings together research and development projects as well as best practice examples by giving insight into their expertise. The authors of this anthology give a comprehensive picture of the various aspects of recent research and practice in their respective fields.

Why should anyone care about the medium of communication today, especially when talking about media law in today's digital society? Many emphasise convergence and seek new regulatory approaches in medium law. However, the medium theory insights of Harold Innis, Marshall McLuhan, and the Toronto School of Communication are drawn upon as part of an argument that differences between media and technological definitions continue to play a crucial role in the regulation of the media. Indeed, Mac Síthigh argues that the idea of converged cross-platform, medium-neutral media regulation is unattainable in practice and potentially undesirable in substance. This is demonstrated through the exploration of the regulation of a variety of platforms such as films, games, video on demand, and premium-rate telephone services. Regulatory areas discussed include content regulation, copyright, tax relief for producers and developers, new online services, conflicts between regulatory systems, and freedom of expression. This timely and topical volume will appeal to postgraduate students and postdoctoral researchers interested in fields such as law, policy, regulation, media studies, communications history, and cultural studies.

In their companion volume to *British Army Cap Badges of the First World War*, authors Peter Doyle and Chris Foster present an overview of the main cap badges worn by the British Army during the Second World War, which continued the rich and varied tradition of British regimental insignia. This book describes and illustrates for the first time in high-quality full colour the main types of cap badge worn with many amalgamations, war-raised units, and special forces. British military insignia from the period have a surprising range that differs substantially from that worn by the soldiers of the previous generation. As in the first book, this volume contains contemporary illustrations of the soldiers themselves wearing the badges, employing the skills of an established writer and collector and artist. It provides a unique reference guide for anyone interested in the British Army of the period.

Features a collection of articles from the public press. This title aims to present different perspectives on understanding basic concepts and concerns of business ethics. It provides ideas on how to incorporate these concepts into the policies and decision-making processes of businesses.
