since our first edition of this book many developments in statistical modelling based on generalized linear models have been published and our primary aim is to bring the book up to date naturally the choice of these recent developments reflects our own teaching and research interests the new organization parallels that of the first edition we try to motivate and illustrate concepts with examples using real data and most data sets are available on fstat.uni-muenchen.de/welcome_e.html with a link to data archive we could not treat all recent developments in the main text and in such cases we point to references at the end of each chapter many changes will be found in several sections especially with those

connected to bayesian concepts for example the treatment of marginal models in chapter 3 is now current and state of the art the coverage of nonparametric and semiparametric generalized regression in chapter 5 is completely rewritten with a shift of emphasis to linear bases as well as new sections on local smoothing approaches and bayesian inference chapter 6 now incorporates developments in parametric modelling of both time series and longitudinal data additionally random effect models in chapter 7 now cover nonparametric maximum likelihood and a new section on fully bayesian approaches the modifications and extensions in chapter 8 reflect the rapid development in state space and hidden markov models

this book was written for those who need to know how to collect analyze and present data it is meant to be a first course for practitioners a book for private study or brush up on statistics and supplementary reading for general statistics classes the book is untraditional both with respect to the choice of topics and the presentation the topics were determined by what is most useful for practical statistical work even experienced statisticians will find new topics or new approaches to traditional topics the presentation is as non mathematical as possible mathematical formulae are presented only if they are necessary for calculations and or add to readers understanding a sample survey is developed as a realistic example throughout the book and many further examples are presented which also use data spreadsheets from a supplementary website
