the latest edition of this very successful and authoritative set of tables first published in 1984 still benefits from clear typesetting which makes the figures easy to read and use but has been improved by the addition of new tables these give bayesian confidence limits for the binomial and poisson distributions and for the square of the multiple correlation coefficient which have not been previously available the intervals are the shortest possible consistent with the requirement on probability the authors have taken great care to ensure the clarity of the tables and how their values may be used the tables are easily interpolated the book contains all the tables likely to be required for elementary statistical methods in the social business and natural sciences and will be an essential aid for teachers users and students in these areas

contains new or unpublished tables

generations of biologists have relied on this useful book which presents the basic concepts of statistics lucidly and convincingly it recognizes that students must be aware of when to use standard techniques and how to apply the results they obtain because many biologists do not have a strong mathematical background the arguments are gauged in terms that can be easily understood by those with only an elementary knowledge of algebra mathematical derivations are avoided and formulae are only used as a convenient shorthand although the subject is presented with great simplicity the coverage is wide and will satisfy the needs of those working in many disciplines new material for this third edition includes consideration of pocket electronic calculators and a special chapter devoted to a discussion of problems associated with numerical calculation electronic calculators and computers
