assessment methods in statistical education an international perspective provides a modern international perspective on assessing students of statistics in higher education it is a collection of contributions written by some of the leading figures in statistical education from around the world drawing on their personal teaching experience and educational research the book reflects the wide variety of disciplines such as business psychology and the health sciences which include statistics teaching and assessment the authors acknowledge the increasingly important role of technology in assessment whether it be using the internet for accessing information and data sources or using software to construct and manage individualised or online assessments key features presents successful assessment strategies striking a balance between formative and summative assessment individual and group work take away assignments and supervised tests assesses statistical thinking by questioning students ability to interpret and communicate the results of their analysis relates assessment to the real world by basing it on real data in an appropriate context provides a range of individualised assessment methods including those that deter plagiarism and collusion by providing each student with a unique problem to solve or dataset to analyse this book is essential reading for anyone involved in teaching statistics at tertiary level or interested in statistical education research

generations of biologists have relied on this useful book which presents the basic concepts of statistics lucidly and convincingly it recognizes that students must be aware of when to use standard techniques and how to apply the results they obtain because many biologists do not have a strong mathematical background the arguments are gauged in terms that can be easily understood by those with only an elementary knowledge of algebra mathematical derivations are avoided and formulae are only used as a convenient shorthand although the subject is presented with great simplicity the coverage is wide and will satisfy the needs of those working in many disciplines new material for this third edition includes consideration of pocket electronic calculators and a special chapter devoted to a discussion of problems associated with numerical calculation electronic calculators and computers

there is growing recognition that statistics should be part of the core curriculum for the compulsory schooling of all children leading to a now

urgent need for teachers to be trained in both statistical content and appropriate teaching methods this book lays the foundation for teacher s responses to these changes exploring how best to teach those applied skills which are now seen to be a more relevant part of the content of statistical courses
