animal models represent experimental investigations developed in one species for the purpose of studying phenomena in another species and provide numerous advantages for preclinical research they allow scientists greater control and isolation of important experimental variables animal models are safe reproducible strategies by which to evaluate and design new pharma cological treatment strategies while also allowing direct central nervous system intervention to alter the course of the aberrant behavior animal models have been developed for a number of mental illnesses in this particular domain they hold the promise to shed light on the still obscure etiologies of these illnesses and ultimately to facilitate the development and testing of cures yet true models of mental illness are difficult to develop because mental illness may be a uniquely human phenomenon it was based on these considerations that the macarthur foundation research network on the psychobiology of depression set out to sponsor a conference to review the status problems promises and relevance of animal models to the clinical conditions of affective disorders the conference was held in september 1986 and included participants from both within the network as well as scientists and scholars from various disciplines relevant to the concerns of the conference after the conference was held it became clear to the organizers that the material presented could be helpful to a broader field of investigators since a significant portion of the information has not been presented elsewhere or in the unified context of a monograph

nervous system diseases and disorders are highly prevalent and substantially contribute to the overall disease burden despite significant information provided by the use of animal models in the understanding of the biology of nervous system disorders and the development of therapeutics limitations have also been identified treatment options that are high in efficacy and low in side effects are still lacking for many diseases and in some cases are nonexistent a particular problem in drug development is the high rate of attrition in phase ii and iii clinical trials why do many therapeutics show promise in preclinical animal models but then fail to elicit predicted effects when tested in humans on march 28 and 29 2012 the institute of medicine forum on neuroscience and nervous system disorders convened the workshop improving translation of animal models for nervous system disorders to discuss potential opportunities for maximizing the translation of new therapies from animal models to clinical practice the primary focus of the workshop was to examine mechanisms for increasing the efficiency of translational neuroscience research through discussions about how and when to use animal models most effectively and then best approaches for the interpretation of the data collected specifically the workshop objectives were to discuss key

issues that contribute to poor translation of animal models in nervous system disorders examine case studies that highlight successes and failures in the development and application of animal models consider strategies to increase the scientific rigor of preclinical efficacy testing explore the benefits and challenges to developing standardized animal and behavioral models improving the utility and translation of animal models for nervous system disorders workshop summary also identifies methods to facilitate development of corresponding animal and clinical endpoints identifies methods that would maximize bidirectional translation between basic and clinical research and determines the next steps that will be critical for improvement of the development and testing of animal models of disorders of the nervous system

animal experimentation has been one of the most controversial areas of animal use mainly due to the intentional harms inflicted upon animals for the sake of hoped for benefits in humans despite this rationale for continued animal experimentation shortcomings of this practice have become increasingly more apparent and well documented however these limitations are not yet widely known or appreciated and there is a danger that they may simply be ignored the 51 experts who have contributed to animal experimentation working towards a paradigm change critically review current animal use in science present new and innovative non animal approaches to address urgent scientific questions and offer a roadmap towards an animal free world of science
