game theory could be formally defined as a theory of rational decision in conflict situations models of such situations as they are conceived in game theory involve 1 a set of decision makers called players 2 a set of strategies

available to each player 3 a set of outcomes each of which is a result of particular choices of strategies made by the players on a given play of the game and 4 a set of payoffs accorded to each player in each of the possible outcomes it is assumed that each player is individually rational in the sense that his preference ordering of the outcomes is determined by the order of magnitudes of his and only his associated payoffs further a player is rational in the sense that he assumes that every other player is rational in the above sense the rational player utilizes knowledge of the other players payoffs in guiding his choice of strategy because it gives him information about how the other players choices are guided since in general the orders of magnitude of the payoffs that accrue to the several players in the several outcomes do not coincide a game of strategy is a model of a situation involving conflicts of interests

this book is refreshing innovative and important for several reasons perhaps most importantly it attempts to reconcile game theory with one person decision theory by viewing a game as a collection of one person decision problems as natural as this approach may seem it is hard to find game theory books that really implement this view this book is a wonderful exception in which the transition between decision theory and game theory is both smooth and natural it shows that decision theory and game theory can go and in fact must go hand in hand the careful exposition the many illustrative examples the critical assessment of traditional game theory concepts and the enlightening comparison with the subjectivistic approach advocated in this book make it a pleasure to read and a must have for anyone interested in the

foundations of decision theory and game theory andrés perea maastricht university gabriel frahm s relatively nontechnical book is a bold synthesis of decision theory and game theory from a bayesian or subjectivist perspective it distinguishes between decisions or one person games and games with two or more players but frahm argues that this distinction is not always necessary the two kinds of games can be analyzed within a common theoretical framework he models the dynamics of choice in several different settings e g information may be complete or incomplete as well as perfect or imperfect including one in which players look ahead and make farsighted calculations on which they base their choices his book contains many provocative examples that illustrate the advantages of a unified theory of rational decision making steven j brams new york university

decision makers in managerial and public organizations often encounter decision problems under conflict or competition because they select strategies independently or by mutual agreement and therefore their payoffs are then affected by the strategies of the other decision makers their interests do not

always coincide and are at times even completely opposed competition or partial cooperation among decision makers should be considered as an essential part of the problem when we deal with the decision making problems in organizations which consist of decision makers with conflicting interests game theory has been dealing with such problems and its techniques have been used as powerful analytical tools in the resolution process of the decision problems the publication of the great work by j von neumann and o morgen stern in 1944 attracted attention of many people and laid the foundation of game theory we can see remarkable advances in the field of game theory for analysis of economic situations and a number of books in the field have been published in recent years the aim of game theory is to specify the behavior of each player so as to optimize the interests of the player it then recommends a set of solutions as strategies so that the actions chosen by each decision maker player lead to an outcome most profitable for himself or her self
