language english abstract venomous arthropods are those that release a poisonous substance venom when disturbed they release the venom in their defense against intruders examples of venomous arthropods are scorpions wasps some caterpillars and bees the word parasite is derived from two greek words para meaning beside and sitos meaning food therefore a parasite literally means an organism that is beside another organism for purposes of obtaining food adam et al 1979 defined a parasite as an organism which depends for part of its life or for its entire life on another organism called the host from which it obtains food and shelter according to smyth 1996 hosts are normally of a different species from their parasites parasitism is a kind of adaptation for survival and in any case a true parasite should not kill its host lest it will kill its source of survival and or kill itself too although many parasitic organisms are harmless to the host others are pathogenic they cause disease in their hosts leading to morbidity and death of the host the parasitic mode of life must have been a survival mechanism developed by certain organisms since the beginning of life on earth about 4 billion years ago it must have been impossible for these organisms to survive on their own it is known that environment can change presenting different conditions each time and organisms struggle to cope and survive with the change we are aware that the earth has gone through periods of ice fire meteorite strikes volcanic eruptions global dust veils acid rain and continental upheavals when such changes occur in the environment organisms naturally take refuge in safer habitats hosts or geographical locations better still others change behaviour or transit through an evolutionary process into a new organism in order to fit within the new conditions so changes in the environment present with both challenges and opportunities organisms which were once free living can become parasitic and those which were once non pathogenic can become pathogenic
