a popular way to assess the effort needed to solve a problem is to count how many evaluations of the problem functions and their derivatives are required in many cases this is often the dominating computational cost given an optimization problem satisfying reasonable assumptions and given access to problem function values and derivatives of various degrees how many evaluations might be required to approximately solve the problem evaluation complexity of algorithms for nonconvex optimization theory computation and perspectives addresses this question for nonconvex optimization problems those that may have local minimizers and appear most often in practice this is the first book on complexity to cover topics such as composite and constrained optimization derivative free optimization subproblem solution and optimal lower and sharpness bounds for nonconvex problems it is also the first to address the disadvantages of traditional optimality measures and propose useful surrogates leading to algorithms that compute approximate high order critical points and to compare traditional and new methods highlighting the advantages of the latter from a complexity point of view this is the go to book for those interested in solving nonconvex optimization problems it is suitable for advanced undergraduate and graduate students in courses on advanced numerical analysis data science numerical optimization and approximation theory

technological development has not only provided mankind with more prosperity but with increased destructive power as well these developments combined with an explosive growth of the world population have led to mass casualty situations varying from traffic accidents to war in the 20th century over 200 million people were killed as a result of man made disasters a figure unequalled in the history of mankind it is not surprising therefore that a new medical discipline has emerged disaster medicine the realization that disasters have effects which cross the traditional boundaries of medical specialisms and nationality led to the foundation of the international society of disaster medicine isdm which issued an international curriculum on education and training in disaster medicine as a logical consequence the isdm decided to develop its curriculum into a handbook now available to the global community of disaster medicine specialists this handbook of disaster medicine contains contributions from international experts in the field and will be of value and interest to a wide variety of professionals in the discipline of disaster medicine and management

a special issue of the international journal in information science and engineering neutrosophic sets and systems vol 71 2024 is dedicated to the conference on neutrogeometry neutroalgebra and their applications organized by the latin american association of neutrosophic sciences this event which took place on august 12 14 2024 in havana cuba was made possible by the valuable collaboration of the university of havana the university of physical culture and sports sciences manuel fajardo the josé antonio echeverría university of technology university of informatics sciences and the cuban academy of sciences among other institutions in 2019 smarandache generalized the classical algebraic structures to neutroalgebraic structures or neutroalgebras whose operations and axioms are partially true partially indeterminate and partially false as extensions of partial algebra and to antialgebraic structures or antialgebras whose operations and axioms are totally false and on 2020 he continued to develop them the neutroalgebras antialgebras are a new field of research which is inspired from our real world in classical algebraic structures all operations are 100 well defined and all axioms are 100 true but in real life in many cases these restrictions are too harsh since in our world we have things that only partially verify some operations or some laws similarly a classical geometry structure has all axioms totally 100 true a neutrogeometry structure has some axioms that are only partially true and no axiom is totally 100 false whereas an antigeometry structure has at least one axiom that is totally 100 false and in general in any field of knowledge one has structure neutrostructure and antistructure which were inspired from our real world where the laws axioms do not equally apply to all people and in the same degree this special issue aims to highlight the most recent advances and applications in the fields of neutrogeometry and neutroalgebra two areas that are at the forefront of contemporary mathematical and scientific thought during the conference the mathematical foundations and practical applications of these disciplines were explored as well as their relevance in the multialism system and other interdisciplinary areas the content of this special issue has been carefully selected to reflect the diversity and depth of the topics discussed at the conference this event and the subsequent publication of these works underline the growing importance of neutrosophic theories in the current scientific landscape we are confident that the ideas and discoveries shared in these pages will be of great value to researchers academics and professionals interested in these innovative areas of knowledge
