the effective management of cardiac arrhythmias either of atrial or of ventricular origin remains a major challenge sudden cardiac death due to ventricular tachyarrhythmias remains the leading cause of death in industrialized countries while atrial fibrillation is the most common rhythm disorder an arrhythmia that s prevalence is increasing and accounts for nearly one quarter of ischemic strokes the elderly population yet despite the enormity of the problem effective therapeutic interventions remain elusive in fact several initially promising antiarrhythmic agents were found to increase rather than decrease mortality in patients recovering from myocardial infarction the question then is what went wrong why have these

interventions proven to be so ineffective an obvious answer is the drugs were designed to attack the wrong therapeutic target clearly targeting single ion channels using either isolated ion channels or single myocytes preparations has proven to be less than effective what then is the appropriate target it is well established that cardiac electrical properties can vary substantially between single cells and intact preparations one obvious example is the observation that action potential duration is much longer in isolated cells as compared to multi cellular preparations or intact hearts due to the low electrical resistance between adjacent myocytes the cells act in coordinated fashion producing electrotonic interdependence between neighboring cells myocardial infarction and or acute ischemia provoke profound changes in the passive electrical properties of cardiac muscle in particular electrotonic uncoupling of the myocytes disrupts the coordinated activation and repolarization of cardiac tissue the resulting compensatory changes in ionic currents decrease cardiac electrical stability increasing the risk for life threatening changes in the cardiac rhythm thus the electrical properties of myocardial cells must be considered as a unit rather than in isolation it is the purpose of this research topic to evaluate the largely neglected relationship between changes in passive electrical properties of cardiac muscle and arrhythmia formation

when the members of the first baseball players union formed their own league in open revolt against the reserve clause and other restrictive practices of the national league baseball journalism became less of a curiosity shop phenomenon and moved into the mainstream baseball writers henry chadwick t h murnane and ella black covered the labor struggle on the field and in the front offices and took sides one as a mouthpiece for the capitalist owners one as a supporter of the cooperatively operated players league and one as a voice for female journalists through a close examination of their work this book charts the rise of sports journalism in response to the famed brotherhood war of 1890

this first hand report on the work of nurses and other caregivers in a nursing home is set powerfully in the context of wider political economic and cultural forces that shape and constrain the quality of care for america s elderly diamond demonstrates in a compelling way the price that business as usual policies extract from the elderly as well as those whose work it is to care for them in a society in which some two million people live in 16 000 nursing homes with their numbers escalating daily this thought provoking work demands immediate and widespread attention an unnerving portrait of what it s like to work and live in a nursing home by giving voice to so many unheard residents and workers diamond has performed an important service for us all diane cole new york newsday with making gray gold timothy diamond describes the commodification of long term care in the most vivid representation in a decade of round the clock institutional life a personal addition to the troublingly impersonal national debate over healthcare reform madonna harrington meyer contemporary sociology
