using his signature conversational writing style and straightforward presentation neil j salkind's best selling tests measurement for people who think they hate tests measurement guides readers through an overview of categories of tests the design of tests the use of tests and some of the basic social political and legal issues that the process of testing involves the third edition includes a new chapter on item response theory new sections on neuropsychological testing new cartoons and additional end of chapter exercises free online resources accompany the text to make teaching easier and provide students with the practice tools they need to master the material

this dictionary of language testing contains some 600 entries on language assessment

great myths of education and learning reviews the scientific research on a number of widely held misconceptions pertaining to learning and education including misconceptions regarding student characteristics how students learn and the validity of various methods of assessment a collection of the most important and influential education myths in one book with in depth examinations of each topic focusing on research evidence regarding how people learn and how we can know if learning has taken place the book provides a highly comprehensive review of the evidence contradicting each belief topics covered include student characteristics related to learning views of how the learning process works and issues related to teaching techniques and testing

vocabulary is now well recognized as an important focus in language teaching and learning now in its third edition this book provides an engaging authoritative guide to the teaching and learning of vocabulary in another language it contains descriptions of numerous vocabulary learning strategies which are supported by reference to experimental research case studies and teaching experience it also describes what vocabulary learners need to know to be effective language users this new edition has been updated to incorporate the wealth of research that has come out of the past decade it also includes a new chapter on out of classroom learning which explores the effect of the internet and electronic resources on learning this vital resource for all vocabulary researchers shows that by taking a systematic approach to vocabulary learning teachers can make the best use of class time and help learners get the best return for their learning effort

among the frustrations constantly confronting the social scientist are those associated with the general process of measurement the importance of good measurement has long been recognized in principle but it has often been neglected in practice in many of the social sciences now that the methodological tools of multivariate analysis simultaneous equation estimation and causal

modeling are diffused more widely into the social sciences and now that the very serious implications of random and non random measurement errors are being systematically investigated it is all the more important that social scientists give top priority to the quality of their data and the clarity of their theoretical conceptualizations as well as to methods for analyzing fallible data this book deals with selected problems of measurement and is written for graduate students and professional social scientists particularly in the technically less developed fields of sociology political science and anthropology the book is organized so that in general one proceeds from problems of data collection to those of data analysis it is not intended to be a complete work covering all types of measurement problems that have arisen in the social sciences instead it represents a series of studies of topics that are deemed to be crucial for the advancement of social science research but which have not received sufficient attention in most of the social sciences the basic purpose is to stimulate further methodological research on measurement and to study the ways in which knowledge that has been accumulated in some fields may be generalized so that it may be applied to others the book is divided into three major parts part i is concerned with applying scaling approaches developed in psychometrics to problems that arise in other social sciences the focus is on finding better ways to ask questions of respondents so as to raise the level of measurement above that of simple ordinal scales part ii focuses on multiple indicator theory and strategies as applied to relatively complex models and to change data in this section the emphasis shifts to how one analyzes fallible data through the construction of explicit measurement error models part iii deals with the statistical analysis of ordinal data including the interpretation and empirical behaviors of various ordinal measures of association the final chapter written by the editor discusses how ordered metric assumptions may be used to make more powerful predictions than those characterizing much of contemporary social science h m blalock jr 1926 1991 was professor department of sociology the university of washington seattle he was recipient of the 1973 asa samuel stouffer prize and was a fellow of the american statistical association and the american academy of arts and sciences and is a member of the national academy of sciences he was the 70th president of the american sociological association
