two thumbs up for d roy although he may have been a brick or two short of a full load one thing is for sure d roy is a true family man he always does the right thing for family and close friends even if it s not the most sensible thing i am sure you will agree and maybe d roy will help you remember someone like him in your past i assure you that droy will remind you to never take for granted days gone by

the theory of transcendental numbers is closely related to the study of diophantine approximation this book deals with values of the usual exponential function  $e^z$  a central open problem is the conjecture on algebraic independence of logarithms of algebraic numbers two chapters provide complete and simplified proofs of zero estimates due to

philippon on linear algebraic groups

photoelectron spectroscopy presents an up to date introduction to the field by comprehensively treating the electronic structures of atoms molecules solids and surfaces brief descriptions are given of inverse photoemission spin polarized photoemission and photoelectron diffraction experimental aspects are considered throughout the book and the results are carefully interpreted in terms of the theory a wealth of measured data is presented in tabular form for easy use by experimentalists this new edition has been substantially updated and extended

the capital asset pricing model capm and the mean variance  $m-v$  rule which are based on classic expected utility theory have been heavily criticized theoretically and empirically the advent of behavioral economics prospect theory and other psychology minded approaches in finance challenges the rational investor model from which capm and  $m-v$  derive haim levy argues that the tension between the classic financial models and behavioral economics approaches is more apparent than real this book aims to relax the tension between the two paradigms specifically professor levy shows that although behavioral economics contradicts aspects of expected utility theory capm and  $m-v$  are intact in both expected utility theory and cumulative prospect theory frameworks there is furthermore no evidence to reject capm empirically when *ex ante* parameters are employed professionals may thus comfortably teach and use capm and behavioral economics or cumulative prospect theory as coexisting paradigms

for several years the two parallel worlds of molecular conductors in one hand and molecular magnetism in the other have grown side by side the former essentially based on radical organic molecules the latter essentially based on the high spin properties of metal complexes over the last few years however organometallic derivatives have started to play an increasingly important role in both worlds and have in many ways contributed to open several passages between these two worlds this volume recognizes this important emerging evolution of both research areas it is not intended to give a comprehensive view of all possible organometallic materials and polymers for example were not considered here rather we present a selection of the most recent research topics where organometallic derivatives were shown to play a crucial role in the setting of conducting and/or magnetic properties in crystalline materials first the role of organometallic anions in tetrafulvalenium based molecular conductors is highlighted by schlueter while kubo and kato describe very recent ortho metalated chelating ligands appended to the ttf core and their conducting salts the combination of conducting and magnetic properties and the search for  $p-d$  interactions are analyzed in two complementary contributions by myazaki and ouahab while valade focuses on the only class of metal bis dithiolene complexes to give rise to superconductive molecular materials in association with organic as well as organometallic cations

this volume is an original collection of articles by 44 leading mathematicians on the theme of the future of the discipline the contributions range from musings on the future of specific fields to analyses of the history of the discipline to discussions of open problems and

conjectures including first solutions of unresolved problems interestingly the topics do not cover all of mathematics but only those deemed most worthy to reflect on for future generations these topics encompass the most active parts of pure and applied mathematics including algebraic geometry probability logic optimization finance topology partial differential equations category theory number theory differential geometry dynamical systems artificial intelligence theory of groups mathematical physics and statistics
