this is a survey of recent work in signal processing some of the papers report progress which has been made in established areas of research such as adaptive filtering and spectral analysis other

papers relate to emerging topics of interest such as wavelet analysis fractal approximation and nonlinear filtering particular effort was made to include papers which consider the development of mathematical techniques for various signal processing applications ranging from radar and communication systems to astronomy seismology and medical imagery the keynote paper entitled adaptive algorithms for blindchannel equalisation by professor j g proakis encompasses all of these characteristics and thus sets the tone for the rest of the volume whilst reporting some highly significant research

this is the first truly comprehensive and thorough history of the development of mathematics and a mathematical community in the united states and canada this first volume of the multi volume work takes the reader from the european encounters with north america in the fifteenth century up to the emergence of a research community the united states in the last quarter of the nineteenth in the story of the colonial period particular emphasis is given to several prominent colonial figures jefferson franklin and rittenhouse and four important early colleges harvard québec william mary and yale during the first three quarters of the nineteenth century mathematics in north america was largely the occupation of scattered individual pioneers bowditch farrar adrain b peirce this period is given a fuller treatment here than previously in the literature including the creation of the first phd programs and attempts to form organizations and found journals with the founding of johns hopkins in 1876 the american mathematical research community was finally and firmly founded the programs at hopkins chicago and clark are detailed as are the influence of major european mathematicians including especially klein hilbert and sylvester klein s visit to the us and his evanston colloquium are extensively detailed the founding of the american mathematical society is thoroughly discussed david zitarelli was emeritus professor of mathematics at temple university a decorated and acclaimed teacher scholar and expositor he was one of the world s leading experts on the development of american mathematics author or co author of over a dozen books this was his magnum opus sure to become the leading reference on the topic and essential reading not just for historians in clear and compelling prose zitarelli spins a tale accessible to experts generalists and anyone interested in the history of science in north america

this cime series book provides mathematical and simulation tools to help resolve environmental hazard and security related issues the contributions reflect five major topics identified by the sies strategic initiatives for the environment and security as having significant societal impact optimal control in waste management in particular the degradation of organic waste by an aerobic biomass by means of a mathematical model recent developments in the mathematical analysis of subwave resonators conservation laws in continuum mechanics including an elaboration on the notion of

weak solutions and issues related to entropy criteria the applications of variational methods to 1 dimensional boundary value problems in particular to light ray tracing in ionospheric physics and the mathematical modelling of potential electromagnetic co seismic events associated to large earthquakes this material will provide a sound foundation for those who intend to approach similar problems from a multidisciplinary perspective

this is the first truly comprehensive and thorough history of the development of a mathematical community in the united states and canada this second volume starts at the turn of the twentieth century with a mathematical community that is firmly established and traces its growth over the next forty years at the end of which the american mathematical community is pre eminent in the world in the preface to the first volume of this work zitarelli reveals his animating philosophy i find that the human factor lends life and vitality to any subject history of mathematics in the zitarelli conception is not just a collection of abstract ideas and their development it is a community of people and practices joining together to understand perpetuate and advance those ideas and each other telling the story of mathematics means telling the stories of these people their accomplishments and triumphs the institutions and structures they built their interpersonal and scientific interactions and their failures and shortcomings one of the most hopeful developments of the period 1900 1941 in american mathematics was the opening of the community to previously excluded populations increasing numbers of women were welcomed into mathematics many of whom including anna pell wheeler olive hazlett and mayme logsdon are profiled in these pages black mathematicians were often systemically excluded during this period but in spite of the obstacles elbert frank cox dudley woodard david blackwell and others built careers of significant accomplishment that are described here the effect on the substantial community of european immigrants is detailed through the stories of dozens of individuals in clear and compelling prose zitarelli dumbaugh and kennedy spin a tale accessible to experts general readers and anyone interested in the history of science in north america
