a collection of lectures from eight authoritative speakers high energy phenomenology is a concise introduction for postgraduates new to the field and provides a comprehensive overview of important research activities results and future directions for existing researchers coverage includes ian aitchison s introduction of standard model foundations hera physics the physics and experimental challenges of future hadron colliders and particle physics and cosmology the book concludes with alain blondel s chapter on precision tests of the standard electroweak model at lep

the 4th san miniato topical seminar on the standard model and just beyond was a continuation of the meetings held in 1985 1987 and 1991 and covered essentially similar topics the program focused on reviews of the present experimental progress in precise electroweak and qcd tests heavy flavour physics particularly mixing and the search for new particles the emphasis was on the most recent results coming from the large statistics data samples collected at lep other e e machines hadron colliders and fixed target experiments the present status of the theory was reviewed and one session was dedicated to the discussion of future plans and physics issues

these proceedings provide a general summary of the theoretical and experimental results which have established qcd as the theory of the strong interactions in the past 20 years the experimental status of this theory in e e annihilation deep inelastic lepton nucleon scattering and hadron hadron collisions is reviewed and the theoretical implications are critically discussed in addition our knowledge on the non perturbative sector of qcd based on lattice and sum rule approaches is summarized
