irrigation fundamentals is a comprehensive text on the basic principles and practices of applied agricultural irrigation written over a period of more than 10 years it is based on the authors extensive experience in farming consulting research teaching and other related agricultural activities the book is for use by teachers of introductory courses in irrigation farmers who have some basic technical knowledge and for administrators who need a general understanding of irrigation as an aid for policy decisions in water resource development and planning various factors that influence crop yield and production including climate fertility water drainage and agronomic practices are addressed the various irrigation methods such as border basin contour furrow sub sprinkle and drip or trickle are described and conditions are given for selection of the appropriate method to use recent developments and new technology are included herein when they have obvious practical applications but for the most part the material presented in this book is based on well established principles and practices much of the content is very practical and much is essentially nontechnical nevertheless some of the material covered in this book goes beyond the basic concepts in an attempt to better describe the relationships and techniques employed by irrigation scientists and irrigation engineers from the preface the future of the world depends very much on how we manage natural resources since the year 1900 there has been a ninefold increase in global carbon emissions from burning fossil fuels and the world population has increased about 3 7 times in this century vast areas of forests have been destroyed and irrigated lands now produce 40 of the food supply due to depletion of groundwater reserves and an increase in population irrigated area per capita is declining consequently the irrigation of additional alluvial lands is a strategic necessity for all of humankind much of the alluvial lands cannot be made productive without prior development of water resources through flood control drainage and irrigation the production of electricity through hydropower and the production of alcohol fuel from irrigated crops as has been practiced for many years in brazil can slow the increase in carbon emissions such diverse developments are typically not separable rather they must be considered as integral parts of a comprehensive development plan the

conservation of natural resources and increasing productivity of irrigated lands are also strategic necessities much of the current technology is highly transferable and crop yields can be significantly increased on lands already under irrigation the authors have worked in many countries in connection with resource inventories teaching and the planning development and use of irrigation as a tool for increasing production and providing employment they have written extensively and have been honored for their achievements they have considerable experience with everything from primitive low technology irrigation developments to highly developed irrigation in the usa and in dozens of countries around the world both of the authors have dedicated their careers to teaching research and consulting in agricultural irrigation and water resources development and planning it is their hope and expectation that this book will provide incentives for investigating and documenting land and water resources improving development increasing crop yields conserving resources and improving the environment from the table of contents chap 1 introduction irrigation fundamentals a definition of irrigation statistical perspectives of agricultural irrigation chap 2 factors influencing crop production introduction temperature radiation and evaporative potential climate change soil fertility and fertilizers water availability and distribution soil aeration and drainage plant density spacing and leaf area index crop variety chap 3 agricultural soils introduction soil texture and structure soil classification and evaluation bureau of reclamation land classification soil age and topography soil chemistry infiltration rates soil water relationships equations for soil water content soil water potential measuring soil water content chap 4 evaluating irrigation resources introduction climate hydrology human and other factors integrated development chap 5 irrigation methods introduction graded border irrigation basin irrigation contour levees furrow irrigation sub irrigation sprinkle irrigation drip or trickle irrigation selecting an irrigation method land grading and leveling laser leveling equipment and practices computing diagonal slopes irrigation system evaluation chap 6 crop water requirements introduction direct methods indirect methods potential evaporation reference evapotranspiration extraterrestrial solar radiation irrigation requirements crop coefficients chap 7 irrigation scheduling introduction allowable water depletion monitoring soil water scheduling irrigations rice irrigation

unrivalled in its coverage and unique in its hands on approach this guide to the design and construction of scientific apparatus is essential reading for every scientist and student of engineering and physical chemical and biological sciences covering the

physical principles governing the operation of the mechanical optical and electronic parts of an instrument new sections on detectors low temperature measurements high pressure apparatus and updated engineering specifications as well as 400 figures and tables have been added to this edition data on the properties of materials and components used by manufacturers are included mechanical optical and electronic construction techniques carried out in the lab as well as those let out to specialized shops are also described step by step instruction supported by many detailed figures is given for laboratory skills such as soldering electrical components glassblowing brazing and polishing

this comprehensive handbook is recognized as the definitive stand alone energy manager s desk reference used by tens of thousands of professionals throughout the energy management industry this new ninth edition includes new chapters on energy management controls systems compressed air systems renewable energy and carbon reduction there are major updates to chapters on energy auditing lighting systems boilers and fired systems steam and condensate systems green buildings waste heat recovery indoor air quality utility rates natural gas purchasing commissioning financing and performance contracting and much more with numerous new and updated illustrations charts calculation procedures and other helpful working aids

the second edition of hot embossing theory of microreplication will present the current state of the art in microreplication with a focus on hot embossing nanoimprint thermoforming and roll to roll replication polymer processing the theory of polymers and the processing of polymers are discussed in detail aspects of process simulation and the corresponding material models are also covered the book contains in depth analysis of processing processes and replication techniques including mold fabrication monitoring data analysis and reliability of molded parts is also discussed in the second edition new processes are included including the process of micro and nanothermoforming to generate 3d structures and the hot pulling processes to generate hierarchical structures with high aspect ratios based on hot pulling nanofur for oil water separation is a large scale biomimetic application upscaling especially the seamless roll to roll replication is also explored the book is designed to cover the entire workflow for a seamless lithographic sleeve this new edition marks a substantial update of the previous edition incorporating several new chapters it is an important resource for materials scientists and engineers working in the areas of micro and nanofabrication

comprehensively updated to include new techniques processes and variables that have come to prominence in recent years includes new chapters that address monitoring properties of molded parts 3d thermoforming hot pulling functional materials smart surfaces and upscaling by roll 2 roll discusses the entire microreplication process from theory and processes to technology and mold to surface oriented applications
