advancements in data science have created opportunities to sort manage and analyze large amounts of data more effectively and efficiently applying these new technologies to the healthcare industry which has vast quantities of patient and medical data and is increasingly becoming more data reliant is crucial for refining medical practices and patient care data analytics in medicine concepts methodologies tools and applications is a vital reference source that examines practical applications of healthcare analytics for improved patient care resource allocation and medical performance as well as for diagnosing predicting and identifying at risk populations highlighting a range of topics such as data security and privacy health informatics and predictive analytics this multi volume book is ideally designed for doctors hospital administrators nurses medical professionals it specialists computer engineers information technologists biomedical engineers data processing specialists healthcare practitioners academicians and researchers interested in current research on the connections between data analytics in the field of medicine

in this thesis we investigate the applicability of the shearlet transform for the task of pedestrian detection due to the usage of in several emerging technologies such as automated or autonomous vehicles pedestrian detection has evolved into a key topic of research in the last decade in this time period a wealth of different algorithms has been developed according to the current results on pedestrian detection benchmarks the algorithms can be divided into two categories first application of hand crafted

image features and of a classifier trained on these features second methods using convolutional neural networks in which features are learned during the training phase it is studied how both of these types of procedures can be further improved by the incorporation of shearlets a framework for image analysis which has a comprehensive theoretical basis to this end we adapt the shearlet framework according to the requirements of the practical application of pedestrian detection algorithms one main application area of pedestrian detection is located in the automotive domain in this field algorithms have to be runnable on embedded devices therefore we study the embedded realization of a pedestrian detection algorithm based on the shearlet transform
