the productization of emerging technologies related to the fourth industrial revolution fir is now getting more attention across different industries compared to the previous industrial transformations that the world has seen which relied on mechanical innovations the ongoing fir is seeing software and data driven products as the foundation apart from that topics such as circular and sustainable economy as well as climate change are also disrupting the industrial ecosystem for a viable and successful productization of emerging technologies collaborations between interdisciplinary stakeholders are a necessity one of the elements that has been identified to facilitate this collaboration is service design this book aimed to provide comprehensive service design discussions for practitioners in different fields and sectors the aim is to bridge the knowledge gap between experts in academia business and product development among many others to provide a unified understanding of the importance of service design for the productization of emerging technologies the book consists of an overview of emerging technologies product development and service design as well as perspectives from different sectors of the industry the book is expected to benefit multi disciplinary researchers practitioners and general audiences with interests in service design for emerging technologies

annotation in this book we describe the design of services from a systems perspective in this systems perspective we explain three elements of the service system that have

to be balanced the service concept with the value proposition to the users the organisational network in which stakeholders have to cooperate to develop and deliver the service and the technical architecture that uses information and communication technologies to deliver the content these three main elements of a service system are described in detail and illustrated with examples of services from different domains the elements are integrated into a methodology that describes how to design implement and test mobile service systems the trend is that service systems will become time and place independent and at the same time context dependent therefore the design of service systems that can be used anytime and anyplace will become common practice jacket

use case driven object modeling with uml theory and practice shows how to drive an object oriented software design from use case all the way through coding and testing based on the minimalist uml based iconix process in addition to a comprehensive explanation of the foundations of the approach the book makes extensive use of examples and provides exercises at the back of each chapter this book leads by example it demonstrates common analysis and design errors shows how to detect and fix them and suggests how to avoid making the same errors in the future the book also encourages you to examine its uml examples and to search for specific errors you ll get clues then later receive the answers during review sessions toward the end of the book

over heterogeneous environments various phenomena occur which are not as easy to capture as when only a few agents are working together as the multiple software agents are highly collaborative and operate in networked environments they have to be context aware and deal with environment uncertainty this makes their coordination and management more difficult and increases the likelihood of exceptional situations such as security holes privacy violations and unexpected global effects moreover as users and software engineers delegate more autonomy to their mass and put more trust in their results new concerns arise in real life applications
