the strong trend in the biological sciences towards a quantitative characterization of processes has promoted an increased use of thermo dynamic reasoning this development arises not only from the well known power of thermodynamics to predict the direction of chemical change but also from the realization that knowledge of quantitative thermodynamic parameters provides a deeper understanding of many biochemical problems the present treatise is concerned primarily with building up a reliable data base particularly of biothermodynamic and related quantities such as partial specific volumes and compressibilities which will help scientists in basic and applied research to choose correct data in a special field that may not be their own most chapters reflect this emphasis on data provision however it was also felt that the expert user deserved information on the basic methodology of data acquisition and on the criteria of data selection therefore all tables are preceded by a critical evaluation of the techniques as well as a survey of the pertinent studies in the corresponding areas the surveys are usually self consistent and provide references to further sources of data that are important but not covered in the present volume the reader will realize that in different chapters different symbols have been used for the same properties this

unfortunate situation is particularly obvious in those chapters where partial specific or molar quantities had to be introduced however it also occurs in those contributions concerning phase changes of macromolecules

ninfa ballou benore is a solid biochemistry lab manual dedicated to developing research skills allowing students to learn techniques and develop the the critical thinking and organizational approaches necessary to conduct laboratory research ninfa ballou benore focuses on basic biochemistry laboratory techniques but also includes molecular biology exercises a reflection of most courses which concentrate on traditional biochemistry experiments and techniques the experiments are designed so that theory and technique are learned as fundamental research tools and the biochemistry and molecular biology applications are seamlessly integrated throughout the manual the manual also includes an introduction to ethics in the laboratory uncommon in similar manuals most importantly perhaps is the authors three pronged approach to encouraging students to think like a research scientist first the authors introduce the scientific method and the hypothesis as a framework for developing conclusive experiments second the manual s experiments are designed to become increasingly complex in order to teach more advanced techniques and analysis finally gradually the students are required to devise their own protocols in this way students and instructors are able to break away from a cookbook approach and to think and investigate for themselves suitable for lower level and upper level courses ninfa spans these courses and can also be used for some first year graduate work
