Definition and Scope

Obstetrics is the branch of medicine concerned with pregnancy, childbirth, and the postpartum period. It involves monitoring the health of both mother and fetus, managing complications, and ensuring safe delivery. Gynaecology, on the other hand, focuses on the health of the female reproductive organs — including the uterus, ovaries, fallopian tubes, and vagina. It encompasses diagnosis and treatment of conditions like menstrual disorders, infertility, infections, and cancers.

Obstetrics and gynaecology (OB-GYN) is a combined specialty that addresses all aspects of female reproductive health throughout a woman's life cycle.

Importance of Specialized Care

Women often face unique health challenges that require expert management. Proper obstetric and gynecological care can:

- Prevent and treat reproductive health issues
- Support healthy pregnancies and safe deliveries
- Detect and manage gynecologic cancers early
- Improve overall quality of life for women

this book addresses neoplasms of the human trophoblast the scant literature available on the epidemiology of trophoblast neoplasms suggests that they are as much as ten times more common in africa asia india and much of the developing world than in western countries the stimulus for the book evolved out of a common interest to combine western technology with the clinical experience in the developing world in a common pursuit of the study and eradication of trophoblast neoplasia there is substantial evidence to contend that gene derepression as seen in trophoblastic disease may be a universal prerequisite to neoplastic transformation in general the recent discovery that the tumor markers human chorionic gonadotropin hcg or its subunits are identifiable in over 90 percent of all extracted neoplasms suggests a critical role for this common denominator of gene derepression in neoplasia this gene derepression concept in reproductive biology and neoplasia spans many of the basic parameters of human cell replication as related to endocrinology immunology biochemistry electrophysiology genetics and pharmacology the international society for the study of trophoblastic disease focuses on the global aspects of trophoblast neoplasms these global aspects

include epidemiology and etiology of the disease regional variations in treatment of trophoblastic neoplasms and potential ways to adapt and apply western technology to effective use in developing countries it was this perspective that formed the basis for the first world congress on trophoblast neoplasms which convened in nairobi in october 1982
