Although the construction and engineering sector makes important contributions to the economic, social and environmental objectives of a nation, it has a notorious reputation for being an unsafe industry in which to work. Despite the fact that safety performance in the industry has improved, injuries and fatalities still occur frequently. To address this, the industry needs to evolve further by integrating safety into all decision making processes. Strategic safety management in construction and engineering takes a broad view of safety from a strategic decision making and management perspective with a particular focus on the need to balance and integrate science and art when implementing safety management. The principles covered here include the economics of safety, safety climate and culture, skills for safety, safety training and learning, safety in design, risk management, building information modelling and safety research methods and the research practice nexus.
