cell death a biological event important for maintaining the growth development and life processes of organisms mainly includes programmed death apoptosis pyroptosis autophagy mitochondrial apoptosis ferroptosis cuproptosis and disulfidptosis etc and non programmed death cell necrosis many diseases including cancers exhibit dysregulated immune activities as key features due to the increase in oxidative stress which eventually leads to cell death understanding the intricate relationships between cell death oxidative stress and immune regulation could be critical in elucidating the key molecular mechanisms of these diseases possibly uncovering novel therapeutics diagnostics for disease management for example ferroptosis a form of iron dependent cell death that is triggered by the toxic accumulation of oxidative stress can induce immunosuppression in tumor neutrophils whereas inhibition

of ferroptosis can slow tumor progression for another example pyroptosis a form of lytic cell death which can be triggered by oxidative stress when occurs in tumor cells can induce a strong inflammatory response and significant tumor regression
