digital blockchain big data artificial intelligence and virtual reality in healthcare ecosystem is a book that explores the revolutionary impact of blockchain big data and artificial intelligence ai on the pharmaceutical and healthcare sectors the book discusses ai big data

and their applications in drug research clinical trials regulatory compliance and post marketing surveillance the book also discusses education and training in smart pharma demonstrating the potential of ai big data and machine learning to improve workforce capacities the book discusses intellectual property and data privacy issues the legislative framework for ai adoption ethical considerations and future trends in ai enabled drug research manufacturing and healthcare innovation it is a valuable resource for healthcare professionals industrial experts and academicians offering theoretical and practical insights

algorithms are ubiquitous in the contemporary technological world and they ultimately consist of finite sequences of instructions used to accomplish tasks with necessary input values this book analyses the top performing algorithms in areas as diverse as big data artificial intelligence optimization techniques and cloud cyber security systems in order to explore their power and limitations

this book provides insights into contemporary issues and challenges concerning operational research and related mathematical modeling fundamentals such as system reliability scalability and adaptability this collaboration of academia and industry disseminates practical tools and analytics applications of mathematics in engineering and information sciences optimization techniques have gained popularity among system managers for making crucial decisions while meeting multiple needs the focus of this book is the evaluation and optimization of critical decisions related to the system betterment each chapter presents the recent advancements and research opportunities in system assurance operational perspective of modeling system reliability research tools for system dynamics is for academicians and those who need to understand the latest developments in the field of system reliability along with these anyone solving problems within the related application domains will benefit from this compilation

the book artificial intelligence for healthcare machine learning and diagnostics explores how ai and machine learning are reshaping healthcare focusing on diagnosis patient care and treatment across various specialties it covers ai applications in fields such as cardiovascular care orthopedics emergency medicine ent and remote patient monitoring additionally the book discusses ai s transformative role in brain tumor surgery dentistry and elder care showcasing its power to personalize therapies predict outcomes and enhance outpatient efficiency key chapters examine ai in pathology specifically in image analysis and digital pathology and its expanding influence in maternal and fetal health this essential guide provides healthcare practitioners researchers clinical experts and students with insights into ai s practical uses and future potential serving as a valuable reference

for ai driven diagnostic advancements and healthcare solutions

this book explores a wide range of methods for advanced solutions in the field of oncology it explores the transformative role of ai in advancing cancer care focusing on its applications in drug discovery surgical progress and digital twin technology the book provides an in depth analysis of ai s impact on various cancers including breast colorectal brain and others and highlights its potential to enhance early detection accurate diagnosis and personalized treatment the book will investigate the development and optimization of ai algorithms to achieve high accuracy in detecting malignant cells at different stages the technologies encompass machine learning techniques to identify patterns in medical imaging natural language processing to evaluate patient histories and deep learning models to forecast treatment outcomes specific methodologies such as supervised and unsupervised learning models convolutional neural networks for image analysis and reinforcement learning for adaptive treatment strategies are provided the utilization of case studies and real world examples in cancer care will demonstrate every approach enabling readers to gain a practical understanding of how these technologies might be implemented

the distributed transfer function method dtfm is an analytical method for modeling analysis and control of a class of distributed parameter systems that are governed by partial differential equations and that can be defined over multiple interconnected subregions in this comprehensive reference the authors show how the dtfm delivers highly accurate analytical solutions in both the frequency domain and the time domain while offering a versatile modeling technique for various problems in mechanical civil aerospace electrical chemical biomechanical and vehicle engineering
