integral representations of holomorphic functions play an important part in the classical theory of functions of one complex variable and in multidimensional complex analysis in the later case alongside with integration over the whole boundary ad of a domain d we frequently encounter integration over the shilov boundary 5 s d they solve the classical problem of recovering at the points of a do main d a holomorphic function that is sufficiently well behaved when approaching the boundary ad from its values on ad or on s alongside with this classical problem it is possible and natural to consider the following one to recover the holomorphic function in d from its values

on some set  $mead$  not containing  $s$  of course  $m$  is to be a set of uniqueness for the class of holomorphic functions under consideration for example for the functions continuous in  $d$  or belonging to the hardy class  $hp$   $d$   $p$   $1$

this volume contains the proceedings of the 8th international conference on harmonic analysis and partial differential equations held in el escorial madrid spain on june 16 2008 featured in this book are papers by steve hoffmann and carlos kenig which are based on two mini courses given at the conference these papers present topics of current interest which assume minimal background from the reader and represent state of the art research in a useful way for young researchers other papers in this volume cover a range of fields in harmonic analysis and partial differential equations and in particular illustrate well the fruitful interplay between these two fields

in this monograph the author investigates divergence form elliptic partial differential equations in two dimensional lipschitz domains whose coefficient matrices have small but possibly nonzero imaginary parts and depend only on one of the two coordinates he shows that for such operators the dirichlet problem with boundary data in  $l$   $q$  can be solved for  $q_1$  small enough and provide an endpoint result at  $p$   $1$
