this open access book is about causal thinking and the use of causal language with a focus on introducing philosophical ideas about causation to students and researchers of social ecological systems  
ses it takes a systematic approach to three central topics  
the meanings of different causal expressions  
sufficiency of evidence for inferences from observations to causal relations  
and how to handle the complexity of causal relations in social ecological systems  
consequently the book is divided into three parts  
in the first part the authors analyse and discuss the use of causal idiom in ordinary language  
and in the second part they scrutinise the use of causal concepts and causal inference in science  
finally the authors discuss causal reasoning about social ecological systems in multi and interdisciplinary contexts  
this book provides an analysis of the concept of causation useful in the empirical sciences where causal notions and idioms often are used without sufficient reflection  
empirical sciences often use causal idiom drawn from ordinary language and similarly there is little formalisation of causal language and technical concepts in the humanities and social sciences  
this book is a valuable resource for the application of current philosophical discussions about the concept of causation in particular when applied to the analysis of social ecological systems but also when applied to research in the sciences and

humanities

written by the founders of the new and expanding field of numerical algebraic geometry this is the first book that uses an algebraic geometric approach to the numerical solution of polynomial systems and also the first one to treat numerical methods for finding positive dimensional solution sets the text covers the full theory from methods developed for isolated solutions in the 1980 s to the most recent research on positive dimensional sets

in july 1998 i received an e mail from alfred gray telling me i am in bilbao and working on the second edition of tubes tentatively the new features of the book are 1 footnotes containing biographical information and portraits 2 a new chapter on mean value theorems 3 a new appendix on plotting tubes that september he spent a week in valencia participating in a workshop on differential geometry and its applications here he gave me a copy of the last version of tubes it could be considered a final version there was only one point that we thought needed to be considered again namely the possible completion of the material in section 8 8 on comparison theorems of surfaces with the now well known results in arbitrary dimensions but only one month later the sad and shocking news arrived from bilbao alfred had passed away i was subsequently charged with the task of preparing the final revision of the book for the publishers although some special circumstances prevented me from finishing the task earlier the book appears essentially as alfred gray left it in september 1998 the only changes i carried out were the addition of section 8 9 representing the discussion we had the inclusion of some new results on harmonic spaces the structure of hopf hypersurfaces in complex projective spaces and the conjecture about the volume of geodesic balls

eugene marshall presents an original systematic account of spinoza s philosophy of mind in which the mind is presented as an affective mechanism that when rational behaves as a spiritual automaton he explores key themes in spinoza s thought and illuminates his philosophical and ethical project in a striking new way

this text offers an account of wittgenstein s philosophy together with a biographical narrative it explains the key ideas of his work from his books the tractatus logico philosophicus to his masterpiece the philosophical investigations
