how psychological ideas of space have profoundly affected architectural and artistic  
expression in the twentieth century beginning with agoraphobia and claustrophobia in  
the late nineteenth century followed by shell shock and panic fear after world war i  
phobias and anxiety came to be seen as the mental condition of modern life they  
became incorporated into the media and arts in particular the spatial arts of architecture  
urbanism and film this spatial warping is now being reshaped by digitalization and  
virtual reality anthony vidler is concerned with two forms of warped space the first a  
psychological space is the repository of neuroses and phobias this space is not empty  
but full of disturbing forms including those of architecture and the city the second kind  
of warping is produced when artists break the boundaries of genre to depict space in  
new ways vidler traces the emergence of a psychological idea of space from pascal  
and freud to the identification of agoraphobia and claustrophobia in the nineteenth  
century to twentieth century theories of spatial alienation and estrangement in the  
writings of georg simmel siegfried kracauer and walter benjamin focusing on current  
conditions of displacement and placelessness he examines ways in which  
contemporary artists and architects have produced new forms of spatial warping the  
discussion ranges from theorists such as jacques lacan and gilles deleuze to artists  
such as vito acconci mike kelley martha rosler and rachel whiteread finally vidler looks  
at the architectural experiments of frank gehry coop himmelblau daniel libeskind greg  
lynn morphosis and eric owen moss in the light of new digital techniques that while  
relying on traditional perspective have radically transformed the composition  
production and experience perhaps even the subject itself of architecture

in this multidisciplinary book sanda iliescu articulates a rich multi faceted approach to  
the aesthetic experience through in depth discussions of her own lived encounters with  
art architecture and the world around her she advocates a way of looking that blends  
sensory perception formal analysis social and political consciousness and personal  
memory focusing special attention on the aesthetic concept of the figure ground  
problem the author challenges this foundational principle s presumed hierarchies and  
shows how a new and more dynamic understanding of it can enhance our way of  
looking at and understanding art and architecture works discussed in the book include  
a wide range of contemporary and historic art and architecture among them artworks  
by rembrandt matisse eva hesse and david hammons architecture by zaha hadid peter  
zumthor and weiss manfredi and non western works such as a thirteenth century  
chinese vase and the ryōanji dry garden in kyoto japan personal and engaging this book  
is for a wide audience of those practicing studying or with an interest in the creative  
fields from beginners to seasoned professionals

the line is the constitutive element of every drawing and forms the core element of any  
design for art architecture urban design or design in general it resists reduction to  
simple linearity but rather takes on complex and dynamic forms that attract the viewer  
in various ways both consciously and suggestively whether analogue or digital line is  
mobile as the forces movements and effects that line produce are different for each  
type of line straight meandering interrupted or even invisible the book is a stimulating  
celebration of the manifold aspects of line using unique examples from architecture  
design and art combining interviews with designers and essays by various authors

this edited volume considers the ways in which multiple stages phases or periods in an

artistic or design process have served to arrive at the final artifact with a focus on the meaning and use of the iteration to contextualize iteration within artistic and architectural production this collection of essays presents a range of close studies in art architectural and design history using archival and historiographical research media theory photography material studies and critical theory it examines objects as unique yet mutable works by examining their antecedents successive exemplars and their afterlives and thus their role as organizers or repositories of meaning key are the roles of writing the use of media and relationships between object image and reproduction this volume asks how a closer look at iteration reveals new perspectives into the production of objects and the production of thought alike written by an international team of contributors offering a range of perspectives it looks broadly at meaning and insight offered by the iteration for processes of design for historical research and for the reception of creative works

known for and even overshadowed by his brutal and spectacular building cuts gordon matta clark s oeuvre is unique in the history of american art he worked in the 1970s on the borders between art and architecture and his diverse practice is often understood as an outright rejection of the tenets of high modernism stephen walker argues instead for the artist s ambivalent relationship with the architectural heritage he is often claimed to disavow thus making this the first book to extrapolate matta clark s thinking beyond its immediate context walker considers the broad range of matta clark s ephemeral practice from montage to actual interventions and from performance art and installation to drawing film and video bringing to the fore the consistent themes and issues explored through this broad range of media and in particular the complex notion of the discreet violation he reveals the continued relevance of matta clark s artistic and theoretical oeuvre to the reception of artistic and architectural work today

in the early twentieth century chinese traditional architecture and the french derived methods of the École des beaux arts converged in the united states when chinese students were given scholarships to train as architects at american universities whose design curricula were dominated by beaux arts methods upon their return home in the 1920s and 1930s these graduates began to practice architecture and create china s first architectural schools often transferring a version of what they had learned in the u s to chinese situations the resulting complex series of design related transplantations had major implications for china between 1911 and 1949 as it simultaneously underwent cataclysmic social economic and political changes after 1949 and the founding of the people s republic china experienced a radically different wave of influence from the beaux arts through advisors from the soviet union who first under stalin and later khrushchev brought beaux arts ideals in the guise of socialist progress in the early twenty first century china is still feeling the effects of these events chinese architecture and the beaux arts examines the coalescing of the two major architectural systems placing significant shifts in architectural theory and practice in china within relevant contemporary cultural and educational contexts fifteen major scholars from around the world analyze and synthesize these crucial events to shed light on the dramatic architectural and urban changes occurring in china today many of which have global ramifications this stimulating and generously illustrated work is divided into three sections framed by an introduction and a postscript the first focuses on the convergence of chinese architecture and the École des beaux arts outlining the salient aspects of each and suggesting how and why the two met in the u s the second section centers on the question of how chinese architects were influenced by the beaux arts and how chinese architecture was changed as a result the third takes an even closer look at the beaux arts influence addressing how innovative practices new schools of architecture and buildings whose designs were linked to beaux arts assumptions led to

distinctive new paradigms that were rooted in a changing china by virtue of its scope scale and scholarship this volume promises to become a classic in the fields of chinese and western architectural history contributors tony atkin peter j carroll yung ho chang jeffrey w cody kerry sizheng fan fu chao ching gu daqing seng kuan delin lai xing ruan joseph rykwert nancy s steinhardt david vanzanten rudolf wagner zhang jie zhao chen

what is art in the sense of the islamic tradition mohammed hamdouni alami argues that islamic art has historically been excluded from western notions of art that the western aesthetic tradition s preoccupation with the human body and the ban on the

representation of the human body in islam has meant that islamic and western art have been perceived as inherently at odds however the move away from this anthropomorphic aesthetic in western art movements such as modern abstract and constructivist painting have presented the opportunity for new ways of viewing and evaluating islamic art and architecture this book questions the very idea of art predicated on the anthropocentric bias of classical art and the corollary exclusion of islamic art from the status of art it addresses a central question in post classical aesthetic theory in as much as the advent of modern abstract and constructivist painting have shown that art can be other than the representation of the human body that art is not neutral aesthetic contemplation but it is fraught with power and violence and that the presupposition of classical art was not a universal truth but the assumption of a specific cultural and historical set of practices and vocabularies based on close readings of classical islamic literature philosophy poetry medicine and theology along with contemporary western art theory the author uncovers a specific islamic theoretical vision of art and architecture based on poetic practice politics cosmology and desire in particular it traces the effects of decoration and architectural planning on the human soul as well as the centrality of the gaze in this poetic view in arabic nazar while examining its surprising similarity to modern theories of the gaze through this double gesture moving critically between two traditions the author brings islamic thought and aesthetics back into the realm of visibility addressing the lack of recognition in comparison with other historical periods and traditions this is an important step toward a critical analysis of the contemporary debate around the revival of islamic architectural identity a debate intricately embedded within opposing islamic political and social projects throughout the world

in the world of modern art the idea of appropriation or the conscious manipulation of the recognised world of another artist has long been accepted as a legitimate strategy in criticism of the tradition of art authorship challenging the context of viewing contemporary work and the manipulation of omnipresent media images the world of art itself is fair game to be pillaged or mined in the production of new art but there is almost no recognised equivalent aesthetic in architecture philip johnson consistently dealt with the concept of appropriation and used it as a design strategy from the very beginning of his illustrious career a singular taste maker philip johnson influenced art architecture and design during the second half of the 20th century philip johnson and his mischief appropriation in art and architecture looks at the concept of appropriation and how johnson s style was influenced first by his mentor mies van der rohe and then

by post modern ideas and artists this title serves to review johnson s body of work and show that far from being a weakness his use of appropriation was a major part of his innovative success
