traditionally intelligence has been distinguished from all other forms of information working by its secrecy secret intelligence is about the acquisition of

information from entities that do not wish that information to be acquired and ideally never know that it has however the transformation in information and communication technology ict over the last two decades challenges this conventionally held perception of intelligence in one critical aspect that information can increasingly be acquired legally in the public domain open source intelligence osint the intelligence community has recognised this phenomenon by formally creating discrete open source exploitation systems within extant intelligence institutions indeed the exploitation of open source of information is reckoned by many intelligence practitioners to constitute 80 percent or more of final intelligence product yet the resource committed to and status of open source exploitation belies that figure this research derives a model of the high order factors describing the operational contribution of open source exploitation to the broader intelligence function context utility cross check communication focus surge and analysis such a model is useful in three related ways first in determining appropriate tasking for the intelligence function as a whole second as a basis for optimum intelligence resource allocation and third as defining objectives for specifically open source policy and doctrine additionally the research details core capabilities resources and political arguments necessary for successful open source exploitation significant drivers shape the contemporary context in which nation state intelligence functions operate globalisation risk society and changing societal expectation the contemporary transformation in ict percolates each of them understanding this context is crucial to the intelligence community implicitly these drivers shape intelligence and the relationship intelligence manages between knowledge and power within politics in order to optimise decision making because open source exploitation obtains from this context it is better placed than closed to understand it thus at a contextual level this thesis further argues that the potential knowledge derived from open source exploitation not only has a unique contribution by comparison to closed but that it can also usefully direct power towards determination of the appropriate objectives upon which any decisions should be made at all
