originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions the level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics at this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives the solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves the notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems

this text contains 300 problems in mathematical statistics together with detailed solutions

now in its second edition this introductory statistics textbook conveys the essential concepts and tools needed to develop and nurture statistical thinking it presents descriptive inductive and explorative statistical methods and guides the reader through the process of quantitative data analysis this revised and extended edition features new chapters on logistic regression simple random sampling including bootstrapping and causal inference the text is primarily intended for undergraduate students in disciplines such as business administration the social sciences medicine politics and macroeconomics it features a wealth of examples exercises and solutions with computer code in the statistical programming language r as well as supplementary material that will enable the reader to quickly adapt the methods to their own applications

since the publication of my book mathematical statistics shao 2003 i have been asked many times for a solution manual to the exercises in my book without doubt exercises form an important part of a textbook on mathematical statistics not only in training students for their research ability in mathematical statistics but also in presenting many additional results as complementary material to the main text written solutions to these exercises are important for students who initially do not have the skills in solving these exercises completely and are very helpful for instructors of a mathematical statistics course whether or not my book mathematical statistics is used as the textbook in providing answers to students as well as adding additional examples to the main text i have completed this book mathematical statistics exercises and solutions this book consists of solutions to 400 exercises over 95 of which are in my book mathematical statistics many of them are standard exercises that also appear in other textbooks listed in the references it is only a partial solution manual to mathematical statistics which contains over 900 exercises

this book teaches statistics with a modern data analytic approach that uses graphing calculators and statistical software it allows more emphasis to be put on statistical concepts and data analysis than on following recipes for calculations this gives readers a more realistic understanding of both the theoretical and practical applications of statistics giving them the ability to master the subject
