the place of chemistry in the metaphysics of science may be viewed as peripheral compared to physics and biology however a metaphysics of science that disregards chemistry would be incomplete and ill informed this element establishes this claim by showing how key metaphysical issues are informed by drawing on chemistry five metaphysical topics are investigated natural kinds scientific realism reduction laws and causation these topics are spelled out from the perspective of ten chemical case studies each of which illuminates the novel ways that metaphysics of science can be informed by chemistry this title is also available as open access on cambridge core

going green is a hot topic in both chemistry and chemical engineering green chemistry is the design of chemical products and processes that reduce or eliminate the use and generation of hazardous substances green engineering is the development and commercialization of economically feasible industrial processes that reduce the risk to human health and the environment this book summarizes a workshop convened by the national research council to explore the widespread implementation of green chemistry and chemical engineering concepts into undergraduate and graduate education and how to integrate these concepts into the established and developing curricula speakers highlighted the most effective educational practices to date and discussed the most promising educational materials and software tools in green chemistry and engineering the goal of the workshop was to inform the chemical sciences roundtable which provides a science oriented apolitical forum for leaders in the chemical sciences to discuss chemically related issues affecting government industry and universities

this study began as an attempt to understand mechanics in the nineteenth century the terms mechanics and mechanical world view were being used as general descriptions of nineteenth century physicists assumptions and interpretations of nature however there were no studies of the particulars of these assumptions or the range and content of these interpretations rene dugas work on classical mechanics focused on france the

search for the particulars of these forms of mechanics led me to explore precisely what mechanics meant to physicists of a century and more ago however none of lagrange s hamilton s or jacobi s mechanics while elegant fits easily within the history of physics lagrange reduced mechanics to an exercise in analysis hamilton and jacobi used mechanics to explore solutions to partial differential equations they were mathematicians doing mathematics as i went deeper into the matter it became obvious that in the nineteenth century there were two kinds of mechanics each containing a variety of forms one physical the other mathematical there were a group of men using mechanics to understand nature and another group using the equations of mechanics to explore the calculus however when tracing these two traditions back into the eighteenth century physics disappeared altogether

well before germany emerged as a single nation or chemistry as a clearly defined profession german chemists had formed a national scientific community that presaged the increasing specialization so characteristic of modern science it found a forum in the chemical journal established by lorenz crell in 1778 it proved its cohesiveness first by rejecting lavoisier s theory on nationalistic grounds and then after a fierce struggle by rallying behind the french system this pioneering study of the early german chemical community is rich in implications for the social history of science charts tables graphs and illustrations
