it is now well established that all living systems emit a weak but permanent
photon flux in the visible and ultraviolet range this biophoton emission is
correlated with many if not all biological and physiological functions there
are indications of a hitherto overlooked information channel within the living

system biophotons may trigger chemical reactivity in cells growth control differentiation and intercellular communication i e biological rhythms the basic experimental and theoretical framework the technical problems and the wide field of applications in the food industry medicine pharmacology environmental science and basic sciences are presented in this book which also includes the rapidly growing literature this book is written by the most outstanding international scientists familiar with this topic who have been working in this field for many years

this series of volumes is a unique summary of the present state of understanding of solid surfaces the physical basis of chemisorption and heterogeneous catalysis is presented as a well developed science with contributions from an international panel of chemists physicists and metallurgists the books are destined to become a fundamental and indispensable reference source for all those studying the nature of solid surfaces and catalysis

monthly magazine devoted to topics of general scientific interest

the seventh volume in a series devoted to decontamination of small quantities of wastes and treatment of spillage this book describes four methods of degradation and one of concentration from large aqueous volumes of aromatic amines and 4 nitrobiphenyl all five methods are described in an iso style format and have been validated by collaborative research laboratory researchers and administrators responsible for laboratory safety will find this book indispensable
