there are three main elements in an organization s total strategy its  
competitive strategy its organization strategy and its human strategy  
this volume contains twelve articles written over the last twenty five  
years which deal with a firm s organizational strategy in these  
articles my co authors noted in each chapter and i lay out the  
foundations of a theory of organizations that is both integrated and  
powerful the development of this material had its genesis in the early  
1970s at the university of rochester where two complementary  
initiatives spurred this effort one was the research that william  
meckling and i began on agency theory in 1973 which opened up a new set  
of insights into the behavior of managers and firms the second was the  
course development effort that meckling and i began at the same time  
which has led to major courses at both rochester and harvard in our  
course at harvard business school entitled coordination control and the  
management of organizations ccmo my colleagues george baker carliss  
baldwin karen wruck and malcolm salter and i apply the concepts to a  
wide range of management and organizational problems the course one of  
the most successful in the second year of the mba program attracts  
about 600 students each year the history of the course is summarized in  
organizations and markets at the harvard business school 1984 1996 by  
michael c jensen george baker carliss baldwin and karen h wruck in the  
intellectual venture capitalist john h mcarthur and the work of harvard  
business school 1980 1995 edited by thomas k mccraw and jeffrey l  
cruikshank harvard business school press 1998 this article and a  
complete description of the ccmo course including the course syllabus

if knowledge management is to be more than an art it needs to be based on a sound epistemology and understanding of organizations we present a paradigm and an ontology of organizational knowledge based on karl popper's 1972 and later works on evolutionary epistemology maturana and varela's concept of living things as self producing complex systems autopoiesis and theories of hierarchically complex systems this approach to ontology development leads us to conclude that organizations can become living systems and thus have emergent properties of a higher order than the sum of the parts we develop this

theoretical argument by providing examples of how several different types of knowledge created by people within organizations emerge and change through time we suggest the social processes of creating these different types of knowledge gives rise to meta levels of organization that act to maintain the existence and coherence of organizations we think that our ontology improves the basis for understanding the nature of knowledge that is important for proper organizational functioning we draw out recommendations about the management of transformations between personal and organizational knowledge we propose this biological understanding of knowledge in organizations because as practitioners we think it provides a way of interpreting the dynamics of what actually happens in the realm of managing organizational knowledge thus we lay a foundation for better understanding the considerable challenges associated with developing a practical approach to organizational knowledge management as a result
