the aim of this book is to introduce and discuss bioethics in a three synergistic way from the foundations to the current debates in relation to healthcare and social bioethics and thereafter the possible future challenges in this sense the target audience can be from diverse disciplines life and medical sciences law philosophy psychology and education the book will be useful to high school students in their first contacts with bioethics college students teachers and researchers and the general public interested in these controversial debates of the past present and future of bioethics

bioethics aims to provide a framework for making informed and ethical decisions in the face of complex and often controversial issues it is concerned with issues such as informed consent autonomy justice beneficence non maleficence and respect for persons and seeks to balance the interests of individuals communities and society defining the bioethics of displacement presents a challenge despite bioethicists efforts to raise multidisciplinary the truth is that narrow medical bioethics focused on health is currently mainstream bioethics of displacement and its implications defines the bioethics of displacement explains why it is necessary and sets the basic curricula on the bioethics of displacement this book puts displacement in context through historical reflections and stresses how psychological inflexibility and the politics of pain work are reflected in the context of bioethics both in the nature of the research and in bioethics as a force of displacement and the challenges in the bioethical discourse finally the book frames the bioethics of displacement body in the modern bioethics discourse and how it can become a game

changer this work focuses on bioethics confinement displacement global public health and politics this premier reference source is an essential resource for medical professionals pharmacists hospital administrators government officials students and faculty of higher education librarians researchers and academicians

several studies have argued that there is a correlation between short stature and negative experiences and characteristics such as social discrimination economic disadvantage health problems especially for men the idea that short men have a disadvantage in social interactions and in partner choices is also widespread in popular culture and common knowledge it is now possible to use recombinant human growth hormone hgh to treat children with idiopathic short stature iss namely children who are shorter than average for unknown medical reasons critics argue that there is a lack of evidence of both psychological distress caused by short stature and the efficacy of the treatment in increasing children's well being this controversy is reflected in international drug evaluations while the food and drug administration fda in the us granted marketing authorisation for hgh for children with iss in 2003 the european medicines agency ema refused it in 2007 the research presented here had two aims first to identify and analyse the norms values and assumptions about short stature and the use of hgh treatment for children with iss found within sociocultural philosophical and regulatory discussions of these and within narrated lived experiences of short stature second to critically and reflectively discuss how these analyses contribute to bioethical debates on the use of hgh treatment for children with iss it employs what it calls a critical paediatric bioethics theoretical approach which deems as important to carefully analyse different reasoning conceptualisations and arguments around the object of study through a self reflective analysis that is also sceptical about other forms of problematisation and that combines philosophical analyses while being open to social implications and drawing upon empirical methods the first article proposes a critical

understanding of medicalisation as both a concept and a phenomenon and explores what insights such critical understanding brings to ethical discussions about hgh for iss it argues that three main ethical issues concern the medicalisation of short stature the downplayed role of the qualitative dimension of short stature the justification of the treatment as sometimes based on uncritically assumed social beliefs and unrealistic parental expectations and possible misconduct of stakeholders the second article examines the arguments for and against granting marketing authorisation of hgh treatment for the indication of iss presented in selected fda and ema documents it combines argumentative analysis with an approach to policy analysis called what s the problem represented to be and focuses on underlying assumptions and presuppositions about short stature and hgh treatment for iss it then discusses these arguments through the relational experiential and cultural understandings of disability and argues that the choice about whether to give hgh is not merely a choice based on efficacy and safety but requires an examination of the values that we transmit by that choice the third article examines how and why attendance to lived experiences of height is needed in bioethical and biomedical discussions of hgh treatment for children with iss it first describes what it defines as the problem oriented approach to the debate about hgh treatment for children with iss it then offers a sociophenomenological analysis of whether and if so when and how height matters to the interviewed people in the netherlands who are shorter than average without any known medical reasons the sociophenomenological analysis shows the richness of meanings of lived experiences of short stature that cannot be captured by the problem oriented approach and suggests complementing clinical practices with narrative approaches this research contributes to the ethical debate about using hgh for children with iss setting a critical gaze onto the social perception of short stature highlighting some ethical challenges met by stakeholders involved at different levels such as families medical professionals and policy makers and providing new insights into how to address these ethical issues it is

therefore of interest to stakeholders bioethicists and lay people willing to explore alternative ways to address such bioethical dilemmas and other paediatric interventions that aim to normalise children s bodily characteristics

this edited book on ethics represents the outcomes of an international collaborative project that examined the role and place of bioethics in science and technology curricula as science and technology advance ethical issues increasingly are brought to the fore not only both for scientists and technologists but also for the general public science and technology education also reflects this shift and thinking and teaching about ethics in the school curriculum has increased a greater emphasis is being placed on society s general scientific and technological literacy and this includes an understanding of socio scientific issues including ethical decision making although this book has a focus on ethics in the school science and technology curriculum we believe it will also prove useful for those thinking about ethical decision making in a range of contexts outside of the school sector the book will prove useful for university lecturers teachers curriculum developers and policy makers and those that are involved in science and technology decision making more broadly

this book advocates a substantive common ground in global bioethics it starts from an orthodox christian anthropology to highlight the relationship between hospitality dignity and vulnerability as the meeting point between strangers regardless of their value system the universal experience of suffering and death is the unifying starting point of that anthropology therefore in medicine where physicians and patients meet as utter strangers not only as moral strangers hospitality highlights the human dignity and vulnerability of both parties and establishes gratitude compassion and solidarity as the constructive building blocks of a healing practice of medicine and a humane medical system locally and

globally
