despite growing recognition of the importance of context responsivity in psychotherapy and recommendations to develop context responsive models through identification of clinical markers to which therapists need to be responsive the notion of context responsivity in relation to key markers such as resistance remains largely understudied the current study sought to examine therapist responsiveness

during identified moments of resistance i.e. client disagreement with therapist direction in the context of cognitive behavioural therapy (CBT) for generalized anxiety disorder. Westra et al (2015) there were two ways in which context responsivity was investigated the first was to examine whether differences in therapist style i.e. more supportive and less directive behaviour in the presence of disagreement go on to predict proximal i.e. level of subsequent resistance in the session following therapist management of resistance and distal i.e. pre to post worry reduction therapy outcomes to this end the present study utilized the manual for rating interpersonal resistance (Westra et al 2009) to identify moments of client disagreement with therapist direction in turn the motivational interviewing treatment integrity (MITI) (Moyers et al 2010) was used to rate therapist use of theoretically indicated motivational interviewing (MI) skills e.g. level of empathy, collaboration, evocation and support of client autonomy during identified moments of disagreement the second approach to investigating context responsivity was through comparing variations in therapist MI adherence in the presence of disagreement with variations in therapist general MI adherence during randomly selected moments in therapy in order to examine whether the timing of therapist use of MI principles differentially impacts treatment outcomes results indicated that clients whose therapists displayed higher levels of MI relational conditions in the context of disagreement had substantially lower levels of subsequent resistance and post treatment worry furthermore while variations in therapist MI adherence in the context of disagreement were consistently and substantially related to CBT outcomes variations in therapist general MI adherence were not these findings provide support for the context responsivity hypothesis and serve to suggest that systematic incorporation of the client centered relational conditions advanced in MI to the responsive management of resistance in CBT is a valuable clinical endeavor which should become a priority for clinical training

Alzheimer's disease: pathogenesis, core concepts, shifting paradigms and therapeutic targets delivers the concepts embodied within its title this exciting book presents the full array of theories about the causes of Alzheimer's including fresh concepts that have gained ground among both professionals and the lay public acknowledged experts provide highly informative yet critical reviews of the factors that most likely contribute to Alzheimer's including genetics, metabolic deficiencies, oxidative stress and possibly environmental exposures evidence that Alzheimer's resembles a brain form of diabetes is discussed from different perspectives ranging from disease mechanisms to therapeutics this book is further energized by discussions of how neurotransmitter deficits, neuroinflammation and oxidative stress impair neuronal plasticity and contribute to Alzheimer's neurodegeneration the diversity of topics presented in just the right depth will interest clinicians and researchers alike this book inspires confidence that effective treatments could be developed based upon the expanding list of potential therapeutic targets

Higher levels of resistance have been consistently found to be negatively associated with outcome in psychotherapy however the pathways through which resistance impacts therapy outcomes are underexplored given that outcome expectations have been identified as an important common factor influencing therapy outcomes the goals of the present study were to 1) examine impact of resistance on client and therapist outcome expectations *co et al* respectively 2) explore whether the impact of resistance on these expectations mediates the relationship between resistance

and therapy outcome these relationships were tested among 44 clients with severe generalized anxiety disorder treated with cognitive behavioral therapy for severe generalized anxiety in the context of a randomized controlled trial westra constantino antony 2016 resistance was measured for a midtreatment session and coe and toe were assessed at baseline and immediately after the session at which resistance was measured treatment outcome was measured via client rated worry severity at posttreatment as predicted higher resistance was associated with lower subsequent coe and toe b 0.73 p

resistance and the process of therapeutic change paul l wachtel psychotherapy whether practiced from a psychodynamic or a behavioral point of view is rarely as straightforward as textbooks and case reports usually seem to imply more often the work proceeds in fits and starts and often does not seem to be proceeding at all but rather unraveling or moving backward the typical case is in fact quite atypical almost all cases present substantial difficulties for which the therapist feels at least some of the time quite unprepared practicing psychotherapy is a difficult if also rewarding way to earn a living it is no profession for the individual who likes certainty predictability or a fairly constant sense that one knows what one is doing there are few professions in which feeling stupid or stymied is as likely to be a part of one s ordinary professional day even for those at the pinnacle of the field indeed i would be loath to refer a patient to any therapist who declared that he almost always felt effective and clear about what was going on such a feeling can be maintained i believe only by an inordinate amount of bravado and lack of critical self reflection but the therapist trying to get some ideas about how to work with 1 these are of course not the only two points of view in psychotherapy nor do i believe they are the only two of value
