this book takes a new approach to air navigation extending the classic scope of positioning and guidance to efficient and safe 4d flight trajectory management modern air navigation aims at flight trajectories optimisation there is an infinite number of solutions to the classic navigation problem of flying from one airport to another but most of them are wasteful of resources and even risky minimising all costs and risks incurred by the 4d flight trajectory makes air navigation both efficient and safe which are key factors in air navigation services beyond minimising fuel burn and co2 efficiency addresses non co2 emissions and noise this is a visually intensive book using examples and case studies to illustrate the concepts the physics of navigation and the mathematical models involved numerical examples reflect its problem solving nature it is useful to aerospace students engineers pilots air traffic controllers technicians and scientists curious about aviation

human error is cited as a major cause in over 70 of accidents and it is widely agreed that a better understanding of humancapabilities and limitations both physical and psychological would help reduce human error and improve flight safety this book was first published when the uk civil aviation authority introduced an examination in human performance and limitations for all private and professional pilot licences now the joint aviation authorities of europe have published a newsyllabus as part of their joint aviation requirements for flightcrew licensing the book has been completely revised and rewritten to take account of the new syllabus the coverage of basic aviation psychology has been greatly expanded and the section on aviation physiology now includes topics on the high altitude environment and on health maintenance throughout the text avoids excessive jargon and technical language there is no doubt that this book provides an excellent basic understanding of the human body its limitations the psychological processes and how they interact with the aviation environment i am currently studying for my atpl ground exams and i found this book to be an invaluable aid it is equally useful for those studying for the ppl and for all pilots who would like to be reminded of their physiological and psychological limitations general aviation june 2002

this book is a part of the air transport pilot s licence atpl course series provided by the french national university of civil aviation enac describing in detail the mass and balance flight performance and planning elements of the atpl course subject 030
