Paul Danove presents a case frame grammar and lexicon for the book of revelation with three major goals. He first provides a step by step introduction to case frame analysis incorporating various adaptations and extensions to address the needs of the study of the Greek of the New Testament. He then supplies a comprehensive case frame grammar and description of the syntactic, semantic, and lexical requirements that each predicator imposes on its complements. He finally generates a case frame lexicon that guides the interpretation and translation of each predicator occurrence in its grammatical contexts. Danove begins with the method of analysis and description with an overview of case frame grammar, an analysis of the events grammaticalized by the predicators in the book of revelation, descriptions of the usages of these events, and further specification of these descriptions. He then provides illustrative examples of the predicators with each usage, discusses the distinctive grammatical characteristics of revelation, sets forth the protocols for generating lexicon entries, and concludes with the case frame lexicon for predicators in the text of revelation.
