a collection of problems on mathematical physics is a translation from the russian and deals with problems and equations of

mathematical physics the book contains problems and solutions the book discusses problems on the derivation of equations and boundary condition these problems are arranged on the type and reduction to canonical form of equations in two or more independent variables the equations of hyperbolic type concerns derive from problems on vibrations of continuous media and on electromagnetic oscillations the book considers the statement and solutions of boundary value problems pertaining to equations of parabolic types when the physical processes are described by functions of two three or four independent variables such as spatial coordinates or time the book then discusses dynamic problems pertaining to the mechanics of continuous media and problems on electrodynamics the text also discusses hyperbolic and elliptic types of equations the book is intended for students in advanced mathematics and physics as well as for engineers and workers in research institutions

heavy metals in the aquatic environment contains the proceedings of an international conference held in nashville tennessee in december 1973 this conference is co sponsored by the international association on water pollution research the sport fishing institute the american fishing tackle manufacturers association and vanderbilt university s department of environmental and water resources engineering contributors focus on the hazards posed by heavy metals present in the aquatic environment and how to control them this text consists of 45 chapters divided into eight sections this book assesses the environmental impact of heavy metals found in the aquatic environment the economic impact of removing them from waste effluents and the costs vs benefits attained by their removal the social costs are also evaluated after an introduction to dose response relationships resulting from human exposure to methylmercury compounds the discussion turns to the toxicity of cadmium in relation to itai itai disease the effects of heavy metals on fish and aquatic organisms and the analytical methods used for measuring concentrations of methylmercury and other heavy metals the next sections explore the transport distribution and removal of heavy metals along with regulations standards surveillance and monitoring aimed at addressing the problem this book will be of interest to planners and policymakers involved in water pollution control

this book explores fundamental aspects of geometric network optimisation with applications to a variety of real world problems it presents for the first time in the literature a cohesive mathematical framework within which the properties of such optimal interconnection networks can be understood across a wide range of metrics and cost functions the book makes use of this mathematical theory to develop efficient algorithms for constructing such networks with an emphasis on exact solutions marcus brazil and martin zachariasen focus principally on the geometric structure of optimal interconnection networks also known as steiner trees in the plane they show readers how an understanding of this structure can lead to practical exact algorithms for constructing such trees the book also details numerous breakthroughs in this area over the past 20 years features clearly written proofs and is supported by 135 colour and 15 black and white figures it will help graduate students working mathematicians engineers and computer scientists to understand the principles required for designing interconnection networks in the plane that are as cost efficient as possible
