on a september morning in 1973 a hospital administrator in new york city learned of a rogue experiment in progress at his institution and ordered the destruction of a test tube containing a frothy mixture of human eggs and sperm had the experiment been allowed to continue it might have resulted in the first human fetus created through in vitro fertilization a ward winning journalist robin marantz henig takes us back to the early days of ivf when the procedure was viewed as crackpot science and its pioneers as outsiders in the medical world henig lays out the ethical and political battlefield of the 1970s a battlefield that is recreated with each new technology and traces the sea change that has occurred in the public perception of test tube babies t hat it was the first step down

the slippery slope toward genetic engineering designer babies and human clones and a compelling story from the not so distant past which brilliantly presents the scientific and ethical dilemmas we confront ever more starkly as germ line engineering and human cloning become possible provided by publisher

focusing on narratives with supernatural components karen j renner argues that the recent proliferation of stories about evil children demonstrates not a declining faith in the innocence of childhood but a desire to preserve its purity from novels to music videos photography to video games the evil child haunts a range of texts and comes in a variety of forms including changelings ferals and monstrous newborns in this book renner illustrates how each subtype offers a different explanation for the problem of the evil child and adapts to changing historical circumstances and ideologies

longlisted for the baillie gifford prize 2023 a new york times daily telegraph economist mail on sunday and guardian book of the year from the dawn of life itself every being that has ever lived owes its existence to the cell will leave you in awe guardian the discovery of this vital form led to a transformation in medicine but also in our understanding of ourselves not as bodies or machines but as ecosystems it has also given us the power to treat a vast array of mortal maladies and even to create new kinds of human altogether rich with stories of scientists doctors and the patients whose lives may be saved by their work the song of the cell is a stunning ode to the building blocks of life and the cutting edge science harnessing their power for the better profound as big a topic as life itself the times medical magic daily telegraph vast important optimistic mail on sunday

a historian explores the complicated relationship between womanhood and motherhood in this timely refreshingly open hearted study of the choices women make and the cards they re dealt ada calhoun author of why we can t sleep in an era of falling births it s often said that millennials invented the idea of not having kids but history is full of women without children some who chose childless lives others who wanted children but never had them and still others the vast majority then and now who fell somewhere in between modern women considering how and if children fit into their lives are products of their political ecological and cultural moment but history also tells them that they are not alone drawing on deep research and her own experience as a woman without children historian peggy o donnell heffington shows that many of the reasons women are not having children today are ones they share with women in the past a lack of support their jobs or finances environmental concerns infertility and the desire to live different kinds of lives understanding this history how normal it has always been to not have children and how hard society has worked to make it seem abnormal is key she writes to rebuilding kinship between

mothers and non mothers and to building a better world for us all

transformed states offers a timely history of the politics ethics medical applications and cultural representations of the biotechnological revolution from the human genome project to the covid 19 pandemic in exploring the entanglements of mental and physical health in an age of biotechnology it views the post cold war 1990s as the horizon for understanding the intersection of technoscience and culture in the early twenty first century the book draws on original research spanning the presidencies of george h w bush and joe biden to show how the politics of science and technology shape the medical uses of biotechnology some of these technologies reveal fierce ideological conflicts in the arenas of cloning reproduction artificial intelligence longevity gender affirmation vaccination and environmental health interweaving politics and culture the book illustrates how these health issues are reflected in and challenged by literary and cinematic texts from oryx and crake to annihilation and from gattaca to avatar by assessing the complex relationship between federal politics and the biomedical industry transformed states develops an ecological approach to public health that moves beyond tensions between state governance and private enterprise to that end martin halliwell analyzes thirty years that radically transformed american science medicine and policy positioning biotechnology in dialogue with fears and fantasies about an emerging future in which health is ever more contested along with the two earlier books therapeutic revolutions 2013 and voices of mental health 2017 transformed states is the final volume of a landmark cultural and intellectual history of mental health in the united states journeying from the combat zones of world war ii to the global emergency of covid 19
