shell scripting skills never go out of style it s the shell that unlocks the real potential of unix shell scripting is essential for unix users and system administrators a way to quickly harness and customize the full power of any unix system with shell scripts you can combine the fundamental unix text and file processing commands to crunch data and automate repetitive tasks but beneath this simple promise lies a treacherous ocean of variations in unix commands and standards classic shell scripting is written to help you reliably navigate these tricky waters writing shell scripts requires more than just a knowledge of the shell language it also requires familiarity with the individual unix programs why each one is there how to use them by themselves and in combination with the other programs the authors are intimately familiar with the tips and tricks that can be used to create excellent scripts as well as the traps that can make your best effort a bad shell script with classic shell

scripting you'll avoid hours of wasted effort you'll learn not only write useful shell scripts but how to do it properly and portably the ability to program and customize the shell quickly reliably and portably to get the best out of any individual system is an important skill for anyone operating and maintaining unix or linux systems classic shell scripting gives you everything you need to master these essential skills

bash scripting think of a script for a play or a movie or a tv show the script tells the actors what they should say and do a script for a computer tells the computer what it should do or say in the context of bash scripts we are telling the bash shell what it should do a bash script is a plain text file which contains a series of commands these commands are a mixture of commands we would normally type ourselves on the command line such as `ls` or `cp` for example and commands we could type on the command line but generally wouldn't you'll discover these over the next few pages an important point to remember though is anything you can run normally on the command line can be put into a script and it will do exactly the same thing similarly anything you can put into a script can also be run normally on the command line and it will do exactly the same thing you don't need to change anything just type the commands as you would normally and they will behave as they would normally it's just that instead of typing them at the command line we are now entering them into a plain text file in this sense if you know how to do stuff at the command line then you already know a fair bit in terms of bash scripting it is convention to give files that are bash scripts an extension of `sh` `myscript.sh` for example as you would be aware and if you're not maybe you should consider reviewing our linux tutorial linux is an extensionless system so a script doesn't necessarily have to have this characteristic in order to work

have you tried to learn shell scripting on your own but lack the structure you need to really improve your skills one of the biggest complaints i hear from students is that most of the book they've taken in the past simply provide information without any context and without any idea of how to put that information to use this book turns that old frustrating and outdated way of learning on its head it's project based which means instead of learning bits and pieces of information you'll write actual shell scripts that you can use in real world situations you get the chance to immediately put what you learn to use so that you fully understand and remember it in this linux shell scripting for beginners a practical guide to bash scripting linux command line and shell programming book you will learn how to name your shell scripts use the proper permissions on your shell scripts create and use variables in your scripts use shell built in commands and operating system commands make the most out of special variables that are available to you in your scripts make decisions by using if statements and performing several different kinds of tests check the exit statuses of commands and why you need to use cryptographic hash functions create random data so you can do things like automatically generate strong passwords for user accounts perform the same action or set of actions over a series of data utilizing for loops while loops and infinite loops control all types of input and output accept standard input from a user as well as from another program redirect standard output and standard error combine standard output and standard error use command pipe lining perform text and string manipulation process command line arguments creating functions and when to do so parsing analyzing and reporting on log files csv files and other data writing scripts that execute commands on other systems much much more
