ambient intelligence ami is a recent paradigm emerging from artificial intelligence in which computers are used as proactive tools to assist people with their day to day activities making their lives more comfortable another main goal of ami originates from the human computer interaction domain and focuses on offering ways to interact with

systems in a more natural way by means of user friendly interfaces this field is evolving quickly as can be witnessed by the emerging natural language based and gesture based types of interaction the inclusion of computational power and communication technologies in everyday objects is growing and their embeddedness in our environments should be as invisible as possible in order for ami to be successful human interaction with computing power and embedded systems in the surroundings should be smooth and take place without people actually noticing it the only things people should notice in connection with ami are more safety comfort and wellbeing emerging in a natural and inherent way isami is the international symposium on ambient intelligence and aims to bring together researchers from the various disciplines that constitute the scientific field of ambient intelligence to present and discuss the latest results new ideas projects and lessons learned especially in terms of software and applications

this book describes and illustrates the application of several asymptotic methods that have proved useful in the authors research in electromagnetics and antennas we first define asymptotic approximations and expansions and explain these concepts in detail we then develop certain prerequisites from complex analysis such as power series multivalued functions including the concepts of branch points and branch cuts and the all important gamma function of particular importance is the idea of analytic continuation of functions of a single complex variable our discussions here include some recent direct applications to antennas and computational electromagnetics then specific methods are discussed these include integration by parts and the riemann lebesgue lemma the use of contour integration in conjunction with other methods techniques related to laplace s method and watson s lemma the asymptotic behavior of certain fourier sine and cosine transforms and the poisson summation formula including its version for finite sums often underutilized in the literature are asymptotic techniques based on the mellin transform our treatment of this subject complements the techniques presented in our recent synthesis lecture on the exact not asymptotic evaluation of integrals

this book originated from a discussion group teaching linear algebra that was held at the 13th international conference on mathematics education icme 13 the aim was to consider and highlight current efforts regarding research and instruction on teaching and learning linear algebra from around the world and to spark new collaborations as the outcome of the two day discussion at icme 13 this book focuses on the pedagogy of linear algebra with a particular emphasis on tasks that are productive for learning the main themes addressed include theoretical perspectives on the teaching and learning of linear algebra empirical analyses related to learning particular content in

linear algebra the use of technology and dynamic geometry software and pedagogical discussions of challenging linear algebra tasks drawing on the expertise of mathematics education researchers and research mathematicians with experience in teaching linear algebra this book gathers work from nine countries austria germany israel ireland mexico slovenia turkey the usa and zimbabwe

it has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events it is not that the facts of history have changed no one will dispute that the battle of waterloo occurred on june 11 1815 or that the allied invasion of europe began on june 6 1944 what each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation by examining the facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the course of history but also validate contempo rary values and societal ideals although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today s organizational cultural and economic realities hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities
