this anthology is devoted to the implications of necessary conditions for social science research logic methodology research design and theory rarely is the contrast between the prevalence of a concept in scholarship and its absence in methodology texts so wide this book presents hundreds of necessary condition hypotheses representing all areas of political science and all methodologies and authored by many of the most influential political scientists of the last 50 years this volume brings together under one cover essential work that deals not only with the analysis of common methodological logical and research design errors but also the proper means to analyse the many ramifications of necessary condition hypotheses and theories

this first rate text explores the theory and methodology of systems engineering in evaluating alternative courses of action and associated decision making

policies it treats criteria as multidimensional rather than scalar in the development of normative theories these contribute to a behavioral theory of decision making and provide guidance for exercising judgment an introductory discussion of the systemic approach to judgment and decision is followed by explorations of psychological value measurements utility classical decision analysis and vector optimization theory the second section chiefly deals with methods of assessing and evaluating alternatives including both noninteractive and interactive methods a taxonomy and a comparative evaluation of methods conclude the text

one of the more characteristic features of contemporary sociology is an increasing interest in theories more and more theories are being developed in various areas of social investigation we observe also an increasing number of verificational studies aimed primarily toward the verification of various theories the essays presented in this volume deal with theories too but they approach this problem from a methodological perspective there fore it seems worthwhile in the preface to this volume to make a kind of general declaration about the author s aims and his approach to the subject of his interest and about his view of the role of methodological reflection in the development of sciences first let me say what methodology cannot do it cannot be a substitute for the formulation of substantive theories nor can it substitute for the empirical studies which confirm or reject such theories therefore its impact upon the development of any science including the social sciences is only indirect by its undertaking the analysis of research tools and rules of scientific procedures it can also propose certain standards for scientific procedures but the application of these standards is the domain of substantive researchers and it is the substantive researchers who ultimately develop any science nevertheless the potential impact of methodological reflection even if only indirect should not be underestimated

philosophical methodology offers an up to date assessment of different methods of doing philosophy and develops a novel account of the structure and goals of

inquiry it allows philosophers and students of philosophy to better understand their topics and shows how philosophy can continue to make progress in answering its central questions

teacher educators live hectic lives at institutional and discipline boundaries our greatest potential for influence is through developing relationships with others in our practice our work is fundamentally relational and emotional we are obligated to the teachers we teach and the public students they teach our practice exists in the midst of experience conflicting and often hostile boundaries and between what we know from research and what we understand from practice self study of practice invites researchers to embrace the hectic and fragmented territory of practice as the space for study this book educates those who would like to explore practice in the methodology of self study it provides both a pragmatic and theoretic guide it grounds the research in ontology and establishes dialogue as the inquiry process it supports researchers through the use of frameworks to guide research and explication of strategies for conducting it

this accessible hands on text has now been revised and updated with expanded coverage of topics including how theory may emerge from exploratory data analysis the book prepares graduate students new researchers and even seasoned investigators to develop their own theories and build on existing ones concrete strategies are provided to help readers generate ideas define constructs and think through relationships and processes that link constructs compelling examples from multiple disciplines illustrate the use of quantitative qualitative and mixed methods orientations to theory construction the text also offers practical advice for writing effectively about theories in papers and grant applications readers learn by doing via application and concept exercises demonstration boxes and practical guidelines the extensive companion website theory construction com includes powerpoint slides of all of the book s figures primers on advanced topics video demonstrations supplemental exercises and other resources new to this edition emergent theory is now covered in mixed methods as well as qualitative approaches plus in a new chapter on exploratory quantitative methods that can help generate new theory through data mining chapter on whether

and how to revise a theory when faced with disconfirmatory data two chapters on the theoretical underpinnings of measurement practices new or expanded discussions of what constitutes a theoretical contribution conceptual logic models thought experiments and more pedagogical features application and concept exercises in every chapter lists of key terms and engaging topical boxes annotated suggestions for further reading new companion website with rich resources for students and instructors chapters stand on their own and can be used in any order
