waste has become an emerging problem threatening the ecosystem given the harmful content generated from the global afterlife of waste these problems affect all spheres of life and the waste must be controlled managed or converted to new products the fundamental ways of addressing the increasing global flows of waste revealed through management processes have significantly increased business opportunities waste must be transformed into valuable products to reduce pollution create jobs and an environmentally pleasant atmosphere researchers have invented methods of converting waste into value added products aiming toward waste management and reduction despite considerable advances the reuse and recycling of agricultural waste as biomass resources renewable feedstock for renewable energy generation and specialty chemicals from several natural sources are underutilized this collection of essays discusses different biomass waste sources biomass feedstocks characterization pre treatment and techniques for valorizing biomass to value added products and policies and regulations on the circular economy

nanomaterials possess astonishing physical and chemical properties they play a key role in the development of novel and effective drugs catalysts sensors and pesticides to cite just a few examples notably the synthesis of nanomaterials is usually achieved with chemical and physical methods needing the use of extremely toxic chemicals or high energy inputs to move towards more eco friendly processes researchers have recently focused on so called green synthesis where microbial animal and plant borne compounds can be used as cheap reducing and stabilizing agents to fabricate nanomaterials green synthesis routes are cheap environmentally sustainable and can lead to the fabrication of nano objects with controlled sizes and shapes two key

features determining their bioactivity however real world applications of green fabricated nanomaterials are largely unexplored besides what do we really know about their non target toxicity which are their main modes of action what is their possible fate in the environment in this framework the present special issue will include articles by expert authorities on nanomaterials synthesis and applications special emphasis will be placed on their impact on the environment and long term toxicity
