the sciences an integrated approach 9th edition by james trefil and  
robert hazen recognizes that science forms a seamless web of  
knowledge about the universe this text fully integrates physics  
chemistry astronomy earth sciences and biology and emphasizes  
general principles and their application to real world situations  
the goal of the text is to help students achieve scientific  
literacy applauded by students and instructors for its easy to read  
style and detail appropriate for non science majors the ninth  
edition has been updated to bring the most up to date coverage to  
the students in all areas of science with increased emphasis on  
climate change sustainability viruses and public health and an  
extensively updated chapter on the importance of bioengineering  
features include the science of life to help show the  
interdisciplinary nature of the many concepts introduced in the  
text sections on living things are included in most chapters the  
chapters that emphasize principles specifically related to life are  
at the end of the book but the biological examples appear  
throughout the ongoing process of science science is a never ending  
process of asking questions and seeking answers in these features  
some of the most exciting questions currently being addressed by  
scientists are examined mathematical equations and worked examples  
whenever an equation is introduced it is presented in three steps  
first as a sentence second as a word equation and finally in its  
traditional symbolic form in this way students can focus on the  
meaning rather than the abstraction of the mathematics an appendix

on english and si units is also included science by the numbers to help students understand the importance of simple mathematical calculations in areas of magnitude several nontraditional calculations have been incorporated for example how much solid waste is generated in the united states how long it would take to erode a mountain and how many people were required to build stonehenge great ideas and great ideas concept each chapter begins with a statement of a great unifying idea or theme in science and a concept map so that students immediately grasp the chief concept of the chapter and how the idea relates to the different branches of science these statements are intended to provide a framework for placing everyday experiences into a broad context stop and think questions challenge students to think critically about the implications of a scientific discovery or principle resources for instructors and students including practice quizzes flashcards lecture slides an instructor s manual images and tables from the book a test bank and much more
