1 workshop theme digital multimedia differs from previous forms of combined media in that the bits that represent text images animations and audio video and other signals can be treated as data by computer programs one facet of this diverse data in terms of underlying models and formats is that it is synchronized and integrated hence it can be treated as integral data records such records can be found in a number of areas of human endeavour modern medicine generates huge amounts of such digital data another ample is architectural design and the related architecture engineering and construction aec industry virtual communities in the broad sense of this word which includes any communities mediated by digital technologies are another example where generated data constitutes an integral data record such data may include data about member profiles the content generated by the virtual community and communication data in different formats including email chat records sms messages videoconferencing records not all multimedia data is so diverse an example of less diverse data but data that is larger in terms of the collected

amount is that generated by video surveillance systems where each integral data record roughly consists of a set of time stamped images the video frames in any case the collection of such in gral data records constitutes a multimedia data set the challenge of extracting meaningful patterns from such data sets has led to the research and development in the area of multimedia data mining

this book covers cutting edge and advanced research on data processing techniques and applications for cyber physical systems gathering the proceedings of the international conference on data processing techniques and applications for cyber physical systems dpta 2020 held in laibin city guangxi province china on december 11 12 2020 it examines a wide range of topics including distributed processing for sensor data in cps networks approximate reasoning and pattern recognition for cps networks data platforms for efficient integration with cps networks machine learning algorithms for cps networks and data security and privacy in cps networks outlining promising future research directions the book offers a valuable resource for students researchers and professionals alike while also providing a useful reference guide for newcomers to the field

with the vast development of internet capacity and speed as well as wide adoption of media technologies in people's daily life a large amount of videos have been surging and need to be efficiently processed or organized based on interest the human visual perception system could without difficulty interpret and recognize thousands of events in videos despite high level of video object clutter different types of scene context variability of motion scales appearance changes occlusions and object interactions for a computer vision system it has been be very challenging to achieve automatic video event understanding for decades broadly speaking those challenges include robust detection of events under clutter event interpretation under complex scenes multi level semantic event inference putting events in context and multiple cameras event inference from object interactions etc in recent years steady progress has been made towards better models for video event categorisation and recognition e g from modelling events with bag of spatial temporal features to discovering event context from detecting events using a single camera to inferring events through a distributed camera network and from low level event feature extraction and description to high level semantic event classification and recognition nowadays text based video retrieval is widely used by commercial search engines however it is still very difficult to retrieve or categorise a specific video segment based on their content in a real multimedia system or in surveillance applications
